COVER

Southern Pacific’s gravel and rock fill across Great Salt Lake, Utah, appears as the wider, light line with curving ends. The darker, straight line is the wooden trestle (built in 1904) which the fill replaced. Twenty-one kilometers (13 miles) long and 11½ meters (38 feet) wide at its crest, the fill carries Southern Pacific’s main line Overseas Route between the Pacific Coast and Chicago. It is traversed by two large box culverts which permit passage of small boats. See page 1027. [Southern Pacific]
