ARTICLES
Evolution of an Active Mathematical Theory: A. M. Gleason .................. 451

   Topology started with differential equations; its latest turn brings it back
   to the differential calculus.

   The Heterogeneity of the Immune Response: J. W. Uhr .................... 457

   The quantity and nature of antigen can regulate a variety of
   immunological functions.

   Empiricism in Latter-day Behavioral Science: V. E. Bixentine ............ 464

   Developments in this field, as in other sciences, invite critical review
   and corrective revision.

COVER  
Integral curves of a first-order differential equation. The simplest problem in differential equations requires the determination of a family of curves from a knowledge of their tangents. These curves appear to be parallel in small regions but may diverge from one another in large regions. See page 451.
