ARTICLES
Evolution of an Active Mathematical Theory: A. M. Gleason

      Topology started with differential equations; its latest turn brings it back to the differential calculus.

The Heterogeneity of the Immune Response: J. W. Uhr

      The quantity and nature of antigen can regulate a variety of immunological functions.

Empiricism in Latter-day Behavioral Science: V. E. Bixentine

      Developments in this field, as in other sciences, invite critical review and corrective revision.

COVER

Integral curves of a first-order differential equation. The simplest problem in differential equations requires the determination of a family of curves from a knowledge of their tangents. These curves appear to be parallel in small regions but may diverge from one another in large regions. See page 451.

American Association for the Advancement of Science was founded in 1848 and incorporated in 1899. Its objects are to further the work of scientists, to facilitate cooperation among them, to promote the effectiveness of science in the promotion of human welfare, and to increase public understanding and appreciation of the importance and promise of the method's of science in human progress.
