COVER

Parts of a 15th-century Eskimo kayak, including bow piece, deck crosspieces, and spear or paddle guards. A unique and homogeneous far-northern culture existed from Alaska and northeastern Siberia across the top of North America to eastern Greenland. Excavations in northwestern Alaska show that the Eskimo way of life dates to at least 3000 B.C., and that it appears to have developed in the region of the Bering Sea. See review of The Archeology of Cape Denbigh, page 913. [Brown University Press]
