The Worthington Biochemical Corporation now makes available from stock the following freeze-dried preparations:

- E. coli, Strain B
- E. coli, Strain W
- E. coli, Crooke's Strain
- Azotobacter vinelandii, A.T.C.C. #9104

Special cultures can also be prepared to order.

Liquid Column Chromatography

Portion of chart, above, illustrates the sequential and simultaneous elution of three separate nucleotide columns, quantitatively recorded by the Gilford 2000 Multiple Sample Absorbance Recorder. The four 1 cm path length Gilford Flow Through Cuvettes used in this experiment were precisely positioned by the Gilford Automatic Cuvette Positioner. The formic acid eluant passed first through the cell in Position 1 to establish the baseline; its flow was then manifolded to shunt it through each of the three columns separately and to their corresponding flow cells in Positions 2, 3 and 4. Zero baseline stability was maintained by the Gilford Automatic Blank Compensator.

Long term stability, linearity with absorbance over a wide measuring range and high sensitivity to small absorbance changes suit the Gilford 2000 ideally for flowing samples. These same advantages, plus the availability of a temperature recording channel and dual wavelength programming, also make the Gilford 2000 a favored tool for sucrose density gradients, enzyme kinetics, DNA-RNA thermal denaturation... or your area of research.

A cyclic ether which, unlike simple aliphatic ethers, is miscible in all proportions with water. It is also completely miscible with most organic solvents. Thus, it uniquely combines the solvent properties of water, alcohol and ethers. An excellent solvent for both mineral and vegetable oils, fats, greases, cellulose acetate and cellulose ethers. On heating it is a good solvent for paraffin and many waxes. The ability to dissolve both water and paraffin makes it an excellent solvent in histological techniques.

5000 POINTS PER SECOND

INFORMATION INTERNATIONAL, INC., Cambridge, Mass., has developed a completely automatic computer film reading system which can read film at the rate of approximately 5,000 points per second. Scientific data recorded on 16, 35 or 70 mm film can be read completely automatically and printed out in the form of numerical listings or recorded in digital form on magnetic tape for further processing and analysis. The film reading system is based on three major elements: a general purpose digital computer, together with a visual display scope; a Programmable Film Reader (PF-1); and computer programs for using the computer and film reader.

THE FILM READING PROCESS. The film reading process involves the scanning of film by a rapidly moving light point on the visual display scope. The output of this scanning operation is detected by a photosensitive device in the film reader and relayed to the digital computer for further processing and analysis. In addition to translating the data itself into a more desirable format, the film reading system can also furnish analyses of the data as may be required.

INFORMATION INTERNATIONAL is the only commercial firm supplying fully automatic computer film reading systems. We do essentially two things. We develop and manufacture film reading systems for clients to use at their own facilities (as, for example, in the case of radar film reading systems we have developed for Lincoln Laboratory and the U.S. Air Force). And we furnish services for reading films which are sent to us for processing (as in the case of oceanographic current meter film). A brochure describing the film reader and film reading systems we have developed is available on request.

SONIFIER®

Reg. TM of Branson Instruments, Inc., Conn.

The Versatile Research And Processing Tool

- Biochemistry
- Virology
- Hematology
- Microbiology
- Pharmacology
- Pathology

Ultrasonically disintegrates cells and tissues with excellent enzyme activity and protein release. Perfect as Homogenizer and Emulsifier.

- Extreme Intensity With Power Selection
- Micro Tip, Continuous Flow
- Sealed Chamber Attachments
- Material Temp. Can Be Kept Below 10°C
- Ideal For Yeast, Staph, Strep, Skin, Heart Muscle, Micrococci, Mycobacteria, All Spores — Candida, Albicans, Bacillus Subtilis, Etc.

Model S-75—$820; Model S-110—$920

**SMALL BOMBS and PRESSURE VESSELS**

Sizes: 22, 45, 71, 128, 200, 310, 510 ml. and larger.
- Materials: T316 stainless, Monel and other alloys.
- Working pressures: up to 5000 psig. and higher.
- Maximum temperatures: 350°, 500° C. and higher.
- Valves, electrodes and other fittings can be provided.
- Let PARR help you select a combination suitable for your particular requirements.

**PARR INSTRUMENT COMPANY**
211 Fifty-Third St.
Moline, Illinois
designed to cover the last two years of a four- or five-year course." Volume I treats motion, heat, and electricity.

Pumping in the Range of 0.11 ml/day to 29.5 ml/min.

The Sage Syringe Pump
gives precise, reproducible
flow rates…available in
models having discrete or
continuously adjustable rates.

The Sage Syringe Pump drives any of
a number of different size syringes up to
100 cc capacity, pumps uniformly against
back pressures of 300 mm of Hg and up,
operates simply and reliably.

Model 234 (illustrated) offers discrete
rates, consists of a compact box housing
a synchronous motor. Above the box are
gears (interchangeable for different rates)
which engage mating racks on a driving
carriage which drives any of 5 different
size syringes. Reproducibility is ±0.1%.

Continuously variable speed models in-
clude a separate control box which is un-
affected by line voltage changes and gives
flow rates over a wide range reproducible
within ±0.5%.

Constant Speed Models
Model 234
(for syringes up to 10 cc size) $145
Model 249
(for syringes up to 100 cc size) $215

Variable Speed Models
Model 237
(for syringes up to 10 cc size) $325
Model 255
(for syringes up to 100 cc size) $395

a great new housing development!

the duplex

The "Duplex" is designed as one cage with two separate compartments: an entirely new concept in animal housing. The immediate advantage is obvious. Now you can simply lift the two cages with one hand and carry them easily to wherever required. The actual time and motion saved over a week, month and a year is statistically staggering!

The double-duty feature of the "Duplex" is fundamentally important to every researcher and breeder. Each compartment houses up to 8 mice for short term experimental studies or is equally efficient for controlled one-to-one breeding. More. The compartments are deep enough to house rats for specific research work. Available in clear acrylic (LC380), clear polycarbonate (LC780) or opaque polypropylene (LC580). Cover (LC820G).

Overall dimensions: 12" square x 6½" deep.

Each compartment (inside dimensions): 11" x 5½" x 6".

Another Exclusive from Lab Cages

AB-SORB-DRI® All-Wood Bedding!

- Uniformly sized square wooden particles scientifically designed for small animals.
- Heat treated to eliminate harmful pathogens and screened and aspirated to remove dust.
- Stays drier longer because movement of animals constantly expose new, dry surfaces.
- Does not pack, resists sticking to cages.
- Makes cages easier to clean and has natural odor-absorbing qualities.
- Animals will not eat it.
- Has longer cage life than other conventional bedding.
- Now proven and accepted coast to coast.

AB-SORB-DRI® is made by Michael Wood Products, Garfield, N.J. Exclusive agent: Lab Cages, Inc.

When price is an object!

Buy this versatile Vacuum Oven for $135

Perhaps the vacuum oven you've wanted costs too much. If so, the new Thelco Model 10 will solve your "need versus budget" problem. Or, perhaps you could eliminate bottlenecks at your bigger, more expensive equipment by switching routine jobs to a Model 10. It's ideal for general drying, conditioning, desiccating, moisture testing...does all and more than many bigger, higher priced vacuum ovens do. It heats to 150°C in 1 hour 40 minutes under full 30 inches of vacuum. Temperature uniformity is precisely held from ±0.5°C at 50°C to ±2.0°C at 150°C. Vacuum loss is less than ½%/hr. with source removed. Two handy shelves provide 108 sq. inches of work area. All this plus Thelco quality throughout. Maybe you need more than one! Order now from your Precision Distributor—he has them in stock.

Since 1920 • The finest In Quality Laboratory Apparatus

Surface Properties of Semiconductors.

NOW FROM BRONWILL . . . THE RENOWNED BRAUN MODEL MSK, MECHANICAL CELL HOMOGENIZER

Offered for the first time in the U.S.A. . . . the outstanding Braun MSK cell homogenizer fully adapted for use in this country.

The superior Braun MSK prepares cell-free extracts for enzyme studies . . . homogenizes yeast, bacteria, tissue cultures or minced organs . . . pulverizes coarse particles (such as pigments or plastics) . . . and makes cell particles (for example yeast mitochondria) ready for study.

Biochemists, bacteriologists, cytologists or research scientists now have at their disposal this extremely efficient, highly effective and speedy tool for use with material either in the dry state or in suspension.

With yeast, 90% disruption of 10 grams is achieved after only 30 seconds at 4000 rpm . . . 99% after 60 seconds!

Bacterial cells show 70% to 90% breakdown after 1 or 2 minutes

Intact yeast mitochondria are prepared in 20 to 30 seconds!

The remarkably short disruption time of the Braun MSK allows the processing of a series of batches, if necessary, in a relatively short period.

The Braun MSK features two-speed, elliptical shaking action. Cell walls are broken down by violent tumbling action of tiny glass beads. The sample may be cooled with CO_{2} and kept below 5°C.

If the Braun MSK would be useful in your work, drop us a note and we’ll send you all the details.
Now LINC is available . . . assembled, tested, and field-supported by Digital Equipment Corporation.

For the first time, a commercial counterpart of the biomedical computer developed under N. I. H. sponsorship can be purchased by research organizations. Built by Digital to specifications released by M. I. T., the new product is compatible in every way with existing LINC's.

Compact LINC brings many advantages of digital data processing into the laboratory where experiments are performed. Controlling, processing, displaying, and storing data under the research worker's direct guidance, LINC not only speeds routine operations, but makes possible wholly new techniques for investigating and analyzing biomedical phenomena. These are proven techniques, shown effective by over 20 LINC's now operating in laboratories throughout the United States.

LINC features include: front-mounted controls, indicators, and connectors; built-in cathode ray tube display; built-in magnetic tape system; built-in analog-to-digital converters; a 2048-word core memory; and a keyboard input.

Look into LINC by visiting Digital's exhibit at the N. I. H. show in Bethesda October 5 through 8. Or write for more information to Technical Publications Department A-86, Digital Equipment Corporation, Maynard, Massachusetts.

Poliovirus: guanidine dependence and loss of neurovirulence for monkeys, B. L. Kohn et al., 945
Poliovirus type I: neutralization by papain-digested antibodies, A. Vogt et al., 1447
Pollak, O. J.; Atherosclerosis (meeting report), 396
Pollard, E. C.: How to remain in the laboratory though head of a department, 1018
Pollock, M.: Germfree animals and biological research, 247
Pollution accumulation rates: estimates from late-glacial sediment of Rogers Lake, Ont., B. Davis and E. S. Deevey, Jr., 1293
Polmar, S. H., and A. G. Steinberg: Dependence of a Gm(b) antigen on the quaternary structure of human γ-globulin, 478
Polyadcytosis in the offspring of mice injected with 5-bromodeoxyuridine, J. A. DiPaolo, 50
Poliovirions studied by x-rays in Chinese hamster cells in vitro, C. K. Yu and W. K. Sinclair, 508
Pompeiano, O. See Bizzi, E., et al.
Potassium-argon and lead-alpha ages of plutonic rocks, Bokan Mountain area, Alaska, M. A. Lanphere et al., 705
Potto in captivity (letter), T. Grand et al., 663
Potts, W. T., and G. Parry, Omotic and igotonic regulation in animals, book review by G. Bishop, 826
Proteinional segregation of chromosomes from a trivalent in Haplopappus gracilis, R. C. Jackson, 511
Preservation of chlorophyll in leaf sections by substances obtained from root exudates, G. J. Prestige (editorial), P. H. Abelson, 771
Prevost, J. See CARRICK, R.
Price, C. C.: Book review of Friedel- Cray and his reactions, 2nd editions, vol. 2, parts 1 and 2, 1174
Priest, J. H. See Priest, R. E.
Priest, R. E., and J. H. Priest: Redif- ferentiation of connective tissue cells in sialen tissue, 1953
Pride and power, V. VAN DYKE, book review by T. C. Schelling, 473
Primary processes in photosynthesis, M. D. Kamen, book review by J. L. Rosenberg, 145
Primate retinal responses: slow changes during repetitive stimulation with light, P. W. Marwaha and D. P. Shapley, 1431
Primitive heart in the echinoid Strongylo- centrotus purpuratus, A. R. A. Booloo- tian and J. L. Campbell, 173
Principles of practice of agricultural research, The, S. C. SALMON and A. A. HANSON, book review by T. C. Byerly, 916
Problems of drug development, L. La- gana, 362
Profitt, W. R., and J. L. Ackerman: Fluoride: its effect on two parameters of bone growth in organ culture, 932
Properties of glass surfaces, The, L. HOLLAND, book review by W. A. Weyl, 42
Prospect of immortality, The, R. C. W. ETTINGER, book review by D. E. Gold- man, 475
Protocols L.: Book review of Osmonic and ionic regulation in animals, 42
Protactinium fluorides, the new class, MPFa, L. B. Aspyre and R. A. Penne- man, 395
Protozoan as the mitochondrial site for action of uncoupling phoenols, E. C. Wein- bach and J. Garbus, 824
Protein-bound iodine in serum of rats breathing 99 percent oxygen, P. Felig et al., 601
Protein synthesis during development: control through messenger RNA, R. B. Scott and E. B. Mathews, 343
Prott, M. H., and C. B. MorreY, Jr., College calculus with analytic geometry, book review of, 145
Public scrutiny of research grants (letter), A. C. Blackman, 1123
Pulmonary alveolar cell inclusions: their development in the rat, S. Buckingham et al., 1192
Pulse radiolysis of potassium bromide solutions, B. Cerk et al., 919
Purified trypsin inhibitor: physical properties and species specificity, T. C. Merigan, 811
Purine and pyrimidine-specific antibod- ies in guinea pig serum: the urchin egg, H. S. Rosenkranz et al., 282
Putnam, F. W.: Book review of The proteins, vol. 1, 1037
Putnam, See also Ballieux, R. E., et al.
