EDITORIAL

Justifying Basic Research

ARTICLES

The Changing Environment of Science: A. T. Waterman
What are the effects of the so-called scientific revolution upon science?
A statistical approach to doses in various body regions provides a realistic
measure of the hazard.
International Nutrition Programs: C. G. King
Improved food practices are essential to reasonable progress for a large
part of the world's population.

COVER
Trade sign used in the shop of Samuel Thaxter (1769–1842) who made and
sold surveying and nautical instruments in Boston. The sign, now in the
collection of the Bostonian Society, is the handiwork of the Skillin brothers
who were famous for their figureheads and other carved figures. See review of Early American Scientific Instruments and Their Makers, page 41.
