EDITORIAL

Economic Benefits from Oceanographic Research

ARTICLES

Chemistry of Isotopes: J. Bigeleisen

Isotope chemistry has opened new areas of chemical physics, geochemistry, and molecular biology.

Galileo’s Discoveries in Dynamics: N. R. Hanson

He left a mathematical stamp on nature still felt by physicists and natural philosophers.

RNA Codewords and Protein Synthesis: M. R. Bernfield and M. W. Nirenberg

The Nucleotide Sequences of Multiple Codewords for Phenylalanine, Serine, Leucine, and Proline

**MEETINGS**

**COVER**

Part of a tail feather from an adolescent male lyrebird. Usually, the transformation process occurs simultaneously on both sides of the rachis, both barbs and barbules being lost. When this feather was molted, however, loss of barbules was proceeding mainly on the left side (× 4). See page 510. [L. H. Smith, National Parks, Victoria, Australia]
