ARTICLES
Ionizing Waves of Potential Gradient: L. B. Loeb
Luminous pulses in electrical breakdown, with velocities a third that of light,
have a common basis.

Circadian Rhythms in Man: J. Aschoff
A self-sustained oscillator with an inherent frequency underlies human
24-hour periodicity.

Onward the Management of Science: The Wooldridge Report: J. D. Cooper

NIH was not cleared on all counts by the Wooldridge Committee, which itself is
rated low on methodology.

Scientific Research: The Case for International Support: A. A. Buzzati-Traverso
Financing of science at a supranational level is a stringent requirement for the
vast majority of countries of the world.

COVER

Autograph of branched streamers from a positive point on the impulse 
potential, intercepted at progressively 
greater distances toward the negative 
plane by a transverse film. The tips 
of each of the branches represent an 
ionizing wave of positive potential 
gradient. The gradient propagates it-
self by photo-electric ionization of the 
air near the film. See page 1417. [E.
