Texts that offer today's knowledge of histology

HISTOLOGY

By Arthur W. Ham, M.B., F.R.S.C.

The latest histologic knowledge is reflected in the new fifth edition of this widely-used book. The tremendous strides in the interpretation of fine structure made possible by the electron microscope are fully detailed. A new section deals with the chemical components of tissue; three chapters are now devoted to cell structure and cell biology; and new material has been incorporated on the cellular basis of immunologic reactions. The chapters which discuss myeloid tissue, bone, muscle, endocrine glands, and the liver have also been heavily revised in accordance with the latest information. There are 140 new illustrations.

ATLAS OF HISTOLOGY

By Sam J. Piliero, Ph.D.; Myron S. Jacobs, Ph.D.; and Saul Wischnerth, Ph.D.

A magnificent collection of photomicrographs (with accompanying explanatory text) depicting the whole range of fine structure of human organs and tissues. The organization of the Atlas is such that each series of figures pertaining to a structure is usually presented first at low, then at intermediate, and finally at high power. Electron micrographs are included to emphasize the fact that microstructure goes far beyond the limits of resolution of the light microscope.

who would like to join the bio-organic staff of a major pharmaceutical company where he will supervise a small group of professionals and work on enzymatic studies and collaborate on problems on the synthesis and characterization of oligo-nucleotides.

A strong organic chemistry background and knowledge of in-vitro procedures pertaining to nucleic acid transformations preferred.

We are based in northern New Jersey only 30 minutes from New York City. Liberal publication policy. Attendance at meetings encouraged. Superior benefits.

Candidates should furnish, in confidence, full details of education, qualifications and experience with current compensation to:

Is this the highest detector resolution obtainable?

Shown above is an example of the high resolution obtained using TMC Lithium Drift Silicon Detectors under controlled conditions. The FWHM on the K conversion line is 3.8 kev or 0.6%. Impressive as this may seem, recent tests have surpassed it. TMC Lithium Drift Semiconductor Detectors are available in a range of six sensitive areas, 80 to 1000 mm², and in five thicknesses, 0.5 to 5.0 mm. We confidently recommend their use when you're looking for sharper energy resolution, faster time response and greater stopping power.

In addition to detectors, TMC can provide low-noise preamplifiers for most solid state detector input requirements and an amplifier-coincidence system for use with TMC and other pulse height analysis systems.
Is science tipping the scale of checks and balances so crucial to democracy?

THE
SCIENTIFIC
ESTATE
by Don K. Price

Don K. Price, administrative advisor to Presidents Eisenhower, Kennedy, and Johnson, and Dean of the Graduate School of Public Administration at Harvard University, examines the question whether the scientific community is acquiring a privileged role in government — something like that of the ecclesiastical estate in the medieval world — leading us toward some new type of centralized power in which the processes of science, rather than those of representative democracy, will determine our policies. Dean Price argues cogently that modern science, though still creating many difficult problems for government, does, in fact, bulwark the traditional commitment of our society to responsible political freedom. $5.95

paper thin-layer solid media
ELECTROPHORESIS
in one versatile reliable set-up

The WCLID Electrophoresis System provides the greatest possible control of test conditions. Power supply voltage up to 600 volts maintained within 1%. Entire surface of the media constantly water-cooled by special flow-through pattern. Lifting plastic cover cuts off voltage and safety interlock prevents accidental shock. Buffer vessel, baffles and electrodes lift out easily for routine cleaning and effortless maintenance.

*reliability guaranteed — with a two-year WCLID warranty

WCLID Model E-800-2B (8000)

Vision—at Booz-Allen Applied Research—is the union of insight and farsightedness in the service of military, governmental and industrial clients. The clarity of this vision has been evident in our organization's reputation for competence, our increasing responsibilities and our continuing need for additional new talent.

Your career growth at Booz-Allen Applied Research will be as rapid as your talents permit. Because our breadth of interests encompasses astronautics, communications, computer technology, mathematics and statistics, meteorology, oceanography, research, reliability, and a dozen more, each professional staff member is able to participate in a wide range of interdisciplinary assignments. If you wish to share an outstanding record of diversified achievement and can bring us appropriate abilities and experience, we would like to hear from you. Please write Mr. Robert M. Flint, Director of Professional Appointments.

we'd like to clear something up...

That's Noise! Your electronic signal may contain the information you want, but unrelated noise may be obscuring it. Regardless of the frequency range of the noise and signal, Enhancetron will clarify the picture.

That's Enhancetron! See how your signal comes through loud and clear. That's because Enhancetron 1024 Portable Signal Averaging Digital Computer adds everything up, noise included. Repetitive signals add in direct proportion to the number of samples taken; noise adds in proportion to the square root. The signal literally "grows" out of the noise.

This new measurement tool brings greater speed, accuracy, and efficiency to noise reduction in every branch of science—yet it costs much less than earlier models of lower resolving power.

ENHANCETRON® Portable Signal Averaging Digital Computer, with 1024-word magnetic core memory. Let us clear up questions you have. Write us for ENHANCETRON literature.

Please send me more information on ND 800—Enhancetron 1024

**Model CSF METALLOGRAPH - MICROSCOPE**
A small, compact, easy to handle unit for normal metallographic work with sharp, bright magnifications up to 1500 X. Photographs are recorded on plates 2½" X 3½". Reflex camera with tilting mirror throws image alternately on plate, filmholder or on the ground glass screen. Built-in 30 watt light source. Optical kit for normal brightfield work consists of: infinity corrected objectives 10x, 40x and 100x; visual eyepieces 5x and 10x. Photographic eyepieces give total magnifications: 50x, 75x, 100x, 200x, 500x and 1000x. With Plain Stage, $870.00; With Mechanical Stage $955.00
Accessories available: Polaroid 35mm and other size film attachments. Also dark field objectives and photographic eyepiece up to 1500 x.
