COVER

Chromosomes in meiosis. This strange anthropomorphic configuration appeared at prometaphase in a microsporocyte. A ring of six chromosomes creates the outline of the “face.” Four bivalents form the “eyes,” “nose,” and “mouth,” giving a chromosome number of 2n = 14. This anomaly is one outcome of a study of reciprocal translocations in chromosomes of Gayophytum eriospermum (about × 5200). [Leonard B. Thein, University of California, Los Angeles]
