Letters to Congressmen 639

ARTICLES

High-Resolution Mass Spectrometry: F. W. McLafferty 641

Elemental composition and structural parts of a molecule are indicated from a submicrogram sample.

Government, Science, and Public Policy: C. P. Snow 650

Dermo-optical Perception: A Peek Down the Nose: M. Gardner 654

Recent tests, offered as confirming evidence for DOP, lack sufficiently tight controls to rule out trickery.

COVER

Hatching of an Indian Rock python (Python molurus). Eggs had been brooded about 60 days before they began to hatch. Whenever the ambient temperature fell below 32°C during that period, the mother produced enough metabolic heat by repeated contractions of her body muscles to maintain the eggs at or near that temperature. See page 694. [New York Zoological Society]
