COVER
Sand dunes on St. Paul Island, Alaska, from an altitude of 400 meters. The island, a member of the Pribilof group, lies near the southwestern edge of the continental shelf extending between Alaska and Siberia. Because of its location the island can provide a record, as to time and environment, of former land connections between Asia and North America. See page 343. [Victor B. Scheffer and Karl W. Kenyon, U.S. Department of the Interior, Seattle, Washington]
