Control of Sensory Fields by Stimulation of Hypothalamus: M. F. MacDonnell and J. P. Flynn 1406
Technical Comment: Pesticide Residues in Total Diet Samples: Bromine Content: B. J. Heywood 1408

MEETINGS

Hemes and Hemoproteins: B. Chance, R. W. Estabrook, R. Yonetani; Leibniz Commemoration: F. Kreiling; Forthcoming Events 1409

COVER

Packing of virus particles about a unique fivefold axis was observed with the electron microscope. The symmetry of the five successive views, obtained from rotating the original through multiples of 72 degrees about the center of the pentagonal group, is emphasized by photographic superposition (about X 500,000). See page 1381. [Gregory Milman, Harvard University; Betty G. Uzman, Anja Mitchell, and Robert Langridge, Children's Cancer Research Foundation and Harvard Medical School]
