ARTICLES

Chromosomal Variation and Evolution: G. L. Stebbins
Polyplody and chromosome size and number shed light on evolutionary processes in higher plants.

Genetics of the Bacterial Cell: F. Jacob

High-Temperature Aqueous Solutions: J. W. Cobble
The chemistry of hot water solutions has established a new and rapidly developing frontier in science.

NEWS AND COMMENT

BOOK REVIEWS

The History of Cell Respiration and Cytochrome, reviewed by S. Granick; other reviews by K. B. Krauskopf; R. V. McGehee; K. L. Franklin; J. Papenoe; J. Keosian; J. B. Irwin; R. Finn; J. R. Reeder; New Books

REPORTS

X-Ray Spectra from Three Cosmic Sources: R. J. Grader et al.
Copper Artifacts: Correlation with Source Types of Copper Ores: A. M. Friedman et al. .......................................................... 1504

Correlation of Archeological and Palynological Data: A. J. Jelinek .................. 1507

Ultracentrifuge Schlieren Photographs: Automatic Analysis: R. Moore et al. ....... 1509

Urine Acid, Uric Acid Dihydrate, and Urates in Urinary Calculi, Ancient and Modern: K. Lonsdale and P. Mason .................................. 1511

Uric Acid Dihydrate: Crystallography and Identification: R. Shirley .................. 1512

Immunoglobulin Structure: Variation in the Sequence of Bence Jones Proteins: K. Titani, E. Whitley, Jr., F. W. Putnam ........................................ 1513

Allelic Antigenic Factor Inv(a) of the Light Chains of Human Immunoglobulins: Chemical Basis: C. Baglioni et al. ........................................... 1517

Light-Chain Heterogeneity of Cold Agglutinins: N. Costea, V. Yakulis, P. Heller ... 1520

Sweating Exercise Stimulation during Circulatory Arrest: W. van Beaumont and R. W. Bullard .......................................................... 1521

Technical Comments: Cutaneous Water Loss in Reptiles: P. J. Bentley and K. Schmidt-Nielsen ......................................................... 1523

COVER Bladder stone, now at the Norfolk and Norwich (England) Hospital Museum, from a boy aged 12 years in 1877. The nucleus is uric acid; intermediate layers are uric acid dihydrate; surface is calcium oxalate monohydrate and ammonium acid urate. Widest dimension, 25 millimeters. See page 1511. [Stone obtained by courtesy of Ridley Thomas]
