COVER

Cross section of a coal mine in South China in the 17th century. Because of the danger of gases, the miners were attached to winches by a safety line, and attempts were made to pipe out the gas with bamboo shafts. The drawing, slightly modified, is interesting as an early cutaway diagram, but the pipe and winch shown are probably based on hearsay rather than observation. See review of Ti'énkung K'ai-Wu. Chinese Technology in the Seventeenth Century, page 730. [Pennsylvania State University Press]
