A user 3,250 miles from London comments:

'With modern methods of air express transport................ consignments are almost invariably punctual to the hour from the Radiochemical Centre at Amersham'.

Last year the Radiochemical Centre made over 56,000 consignments of radioactive material and more than 30,000 were despatched via London Airport. The Centre's proximity to an international airport enables it to maintain a swift, thoroughly dependable, truly worldwide delivery service for radiopharmaceuticals and research radiochemicals.

A comprehensive catalogue 'Radioactive Products' is available free to radioisotope users. For details of our carbon-14 and tritium compounds, U.S. users should write to: Nuclear-Chicago Corporation, 333 East Howard Avenue, Des Plaines, Illinois, 60018.

THE WORLD CENTRE FOR DEPENDABLE RADIOCHEMICALS

Disperser homogenizer reactor emulsifier

Polytron® is a kinematic high-frequency sonic and ultrasonic system for inducing physical or chemical change. Materials which can be treated range in consistency from penicillin to bauxite; they can be solids dispersed in liquids, thixotropic substances, gases, biological matter, and diverse other natural or synthetic compounds.

Both laboratory and production models are available.
