become a focus for schistosomiasis. The vector, the snail Bulinus, was found in areas along the shore which had been cleared of bush and where aquatic plants were growing. Drifting mats of Pistia are spreading the snails about the lake. There would therefore seem to be some danger in this direction, and this is a problem which may present great difficulties.

The symposium was organized by Letitia E. Obeng, (director, Institute of Aquatic Biology of the Ghana Academy of Science) and J. Yanney Ewusie (secretary of the Academy). The delegates were given the opportunity to visit the dam at Akosombo and to travel some distance on the Volta Lake, which was almost full. They also visited the Institute of Aquatic Biology, the University of Ghana, and the University College of Cape Coast.

Proceedings will be published by the Academy.

"DIAL" ULTRA-THIN SECTIONS?

Precisely... since the new Reichert "Om U2" ultramicrotome is automated. Now you just dial for single or continuous ultra-thin sections for electron microscopy. With all controls dial or push-button operated, you merely "select" speed, sequence and thickness of sections. The completely inertia-free thermal advance of the "Om U2" represents a major breakthrough in ultramicrotomy.

The "Om U2" gives you the accuracy of the thermal advance and the advantages of a precision, mechanical advance in one instrument. The tedious task of producing useful ultra-thin sections is now a thing of the past.

Request literature and a free demonstration.

ESTUARIES

Estuaries is the first comprehensive collection of scientific papers covering the comparatively new field of estuarine research. The volume contains seventy-one articles on physical and biological factors, geomorphology, sediments and sedimentation, microbiota, ecology, evolution, fisheries, human influences, and pollution. Estuaries is based on the 1964 Conference on Estuaries, Jekyll Island, Georgia; additional papers have been included to make it the definitive work on the subject. A supplementary bibliography lists the more recent contributions to the discipline.

Edited by George H. Lauff and published in April 1967 by the American Association for the Advancement of Science, Estuaries consists of 776 pages, a supplementary bibliography of 437 entries, 1639 literature citations, 525 illustrations, 85 tables, and an index of more than 14,000 entries.

Cash orders by AAAS members $324.00, regular price $27.00.
