Reformation of Functional Liver Polyribosomes from Ribosome Monomers in the Absence of RNA Synthesis: G. A. Stewart and E. Forber ........................................ 67
Cell Aggregation: Its Enhancement by a Supernatant from Cultures of Homologous Cells: I. E. Lilien and A. A. Moscona .................................................. 70
Hematuria Following Administration of Ethanol: J. M. Orten, K. C. Shrivastava, M. Shih .......................................................... 72
Isoprenoid Biosynthesis in a Cell-Free System from Pea Shoots: J. E. Graefe ........ 73
Carbon-14 and Tritium Measurement by Means of Bremsstrahlung Emissions: J. C. Rosen, G. R. Lauroer, M. Eisenbud ......................... 77
Genetic Mapping of Phenylalanine-tRNA Synthetase in Escherichia coli: A. Böck and F. C. Neidhardt .............................................................. 78
Chenopod and Amaranth Pollen: Electron-Microscopic Identification: M. Tsukada . 80
Enzymatic Identification of Fish Products: A. C. Wilson, G. B. Kitto, N. O. Kaplan . 82
Structural Basis for the Inhibition of Protein Biosynthesis: Mode of Action of Tubulosine: A. P. Grollman ......................................................... 84
Sex Attractant of the Black Carpet Beetle: R. M. Silverstein et al. ....................... 85
Cocoon Surrounding Desert-Dwelling Frogs: A. K. Lee and E. H. Mercer ............ 87
Receptive Fields in the Cat Retina: A New Type: R. W. Rodieck ........................ 90
The (±) Reference: Accuracy of Estimated Mean Components in Average Response Studies: H. Schimmel ...................................................... 92
Electrocortical Correlates of Stimulus Response and Reinforcement: K. H. Pribram, D. N. Spinelli, M. C. Kamback ........................................ 94
Pemoline and Magnesium Hydroxide: Lack of Effect on RNA and Protein Synthesis: H. H. Stein and T. O. Yellin ................................. 96
Animals at Very High Pressures of Helium and Neon: K. W. Miller et al. ............ 97

MEETINGS Biological Nitrogen Fixation: W. S. Silver; Retirement Crisis: F. M. Carp ............... 100

Cover (Top) White-tailed tropic bird, Phae-thon lepturus lepturus; (lower left) adult sacred ibis, Threskiornis aethio-pica abbotti; and (lower right) juvenile red-footed booby, Sula sula rup-briper. These birds are among the hundreds of species of animals and plants whose habitat may be destroyed if plans proceed for establishing a communications center on the island of Aldabra, northwest of Madagascar. Among the animals affected would be the almost extinct giant land tortoise. See page 8. [Roger Gaymer, University of Bristol, Bristol, England]
