COVER Painting executed by artist while under the influence of LSD (150 micrograms). The chrysanthemum (lower right), a painting illustrating the artist's earlier, customary (representational) style, was used as the model. After ingestion of LSD during an investigation of the effects of this drug on artistic production, the artist believed he was painting an excellent piece. After recovery he was not so sure. See page 1189. [Artist, Jack Jones, Santa Monica, California; courtesy of Sidney Cohen, Veterans Administration, Los Angeles, California]

The American Association for the Advancement of Science was founded in 1848 and incorporated in 1874. Its objects are to further the work of scientists, to facilitate cooperation among them, to improve the effectiveness of science in the promotion of human welfare, and to increase public understanding and appreciation of the importance and promise of the methods of science in human progress.
