The first "building block" YAG

Here's the first YAG laser to offer modular design. You can get the basic unit and add the "building blocks" you need from stock - now or in the future.

The versatile TRG Model 400Y Nd doped YAG laser system is adaptable to over 12 different configurations. It delivers over 20 watts of continuous infrared power at 1.06 μm for welding, resistor trimming, silicon dicing, other fabrication work. It can also be operated in single mode with a Barium Sodium Niobate second harmonic crystal for up-conversion to several hundred milliwatts of continuous green light at 0.53 μm for such applications as underwater television, holography, or arial mapping.

Options include a Q-switch module to provide up to 2000 pulses per second at up to 7.0 kilowatts per pulse; three interchangeable laser rods (3, 5, and 6.5 mm); choice of open cavity, or closed cavity design for highest output; optics and temperature control module for up-conversion to green laser light, and a recollimating telescope.

Other features: High reliability . . . e.g., 1,000 test hours without lamp, crystal, or power supply malfunction. Easy alignment . . . confocal Fabry-Perot cavity. Simplified maintenance . . . lamp and other components are readily accessible without disturbing alignment.

Call or write for detailed information to Control Data Corporation, Melville Space and Defense Systems Division, TRG Laser Products, 535 Broad Hollow Road, Melville, New York 11746. Or phone: (516) 531-6344.

WHAT NEXT IN LASERS? ASK . . .

21 FEBRUARY 1969
HERE’S OUR OSMOMETER LINE, TODAY...

What more can you expect from a leader?

All of these outstanding osmometers are available from Advanced Instruments, the company which first introduced a freezing point osmometer back in 1955. We set out to become the leaders in osmometry...and, if sales are any indication, we have succeeded. A few of the contributions we have made to the science of osmetry are: The first schools of osometry, the first modular osmometer, the first thermostatic refrigerator, the first portable model, and the first Hot Line service system.

Now, in addition to the improved 1969 version of our original model we also have a new air-cooled refrigerator with the longest life guarantee in the field, a Hi-Precision Research Osmometer, and a Nanoliter Osmometer for samples less than one millimicroliter. We are adding others to our growing line. To us LEADERSHIP means continuing programs of product improvement, outstanding service, and fast delivery. We think this is the way a leader should act. Don’t you?

A Portable Battery 
Operated Servo Recorder 
Priced at $750

A truly portable servo recorder that operates on 
rechargeable nickel-cadmium or conventional 
1 1/2 volt "D" size flashlight batteries or on AC. 
It features 6" span-sensitivities as low as 2 MV with 
input impedance of 2 megohms and 1/2 second 
full scale response. That's the Esterline Angus 
Port-A-Graph Servo. This solid state recorder 
weighs only 15 pounds and measures 12 1/2" wide, 
9 1/2" high and 6 1/2" deep. Packed into this compact space are eight millivolt and six volt spans, one of 
the most simple servo systems ever devised (only two pulleys) and a 12 speed chart drive. 
Wherever there's a recording job to be done, this field portable recorder with laboratory instrument specifications is ready to go. 

For off-the-shelf delivery, specify Model T171B.

Esterline Corporation, 
Box 24000, Indianapolis, 
Indiana 46224 
Phone 317/244-7611

TSI (Time Sterile Indicator) Tapes and Labels are impregnated with a special chemical to change color after autoclaving. Their pressure-sensitive adhesive sticks to any surface, leaves no messy residue. A variety of tapes are available for use with standard and high vacuum autoclaves as well as high temperature ovens. Special TSI Conversion Labels articulate the change from contaminated to sterile. TSI indicators can be imprinted with any wording you desire. Write for complete information.

All Time Tape products are 
Bacteriostatic for your Safety 
AVAILABLE THROUGH LABORATORY DEALERS.

ESTERLINE ANGUS
Now available...  
**ULTREX™**  
ultra high purity Inorganics

The J. T. Baker Chemical Co. announces the commercial availability of the following ULTREX inorganics:

- Potassium phosphate (monobasic)
- Calcium carbonate
- Lithium carbonate
- Sodium bromide
- Strontium carbonate
- Potassium chloride
- Sodium chloride
- Sodium carbonate
- Ammonium sulfate

Each ULTREX product is supplied with its lot Certificate of Analysis and is available in 100 g. vials, priced at $50.00 per vial.

*Chemically inert • No mixing caviaries • Quick connecting • Leakproof to 500 psi* 

**Chromatronix** valves and fittings will cut hours from the time you spend assembling tubing for chemical analysis. You can connect and disconnect everything with your hands, making finger-tight joints that won't leak at 500 psi. There are fittings for 1/16" and 1/8" tubing. They handle nearly any liquid because only chemically inert materials—Teflon, Kel-F and glass—touch the stream. All are designed with zero dead volume, so there will be no mixing. Other advanced Chromatronix apparatus includes precision pumps that produce unfluctuating flows at pressures up to 50 psi, and high-resolution columns for high performance chromatography. **Send for catalog.**

FOR BLOOD BANKS AND SMALLER LABS

EVERYTHING?

Our new model 10R "Clini-Fuge" was designed especially for versatility and high performance at low cost.

It is probably the lowest cost refrigerated centrifuge available today, with a temperature control range from ~20°C to 40°C.

Features include 2000ml capacity trunnion rotor to handle blood bags, blood bottles and 1000ml bottles, continuous reading tachometer, electro-dynamic braking, timer and auto-transformer. Convenience, quality and economy... throughout. Write for Data Sheet 10R.

Relialab precision temperature baths, circulators and air incubators

You get all three in Relialab Lami-Flow units. Each offers these basic capabilities. Low and high temperature (from −73.3°C to +120°C) baths for use in biological and biochemical applications. Circulators with infinite adjustment of liquid flow up to 450 gals., per minute. Supplies constant coolant to spectrophotometers, refractometers, distillation columns, etc. High-low temperature incubator for a multiplicity of biological and other uses. Transistorized, solid state SCR output. "Automatic reset" proportional controller.

NEW!
Refrigerator Incubator Growth Chamber

Economical! Versatile! Available in three models providing 18, 24 or 49 square feet of usable area on removable shelves. Self-contained, ready to operate. KMH color co-ordinated. NSF approved. Choice of controls gives you a chamber tailored to your needs at an economical price. Write for detailed specifications.
Our newly-available Charles River Rat and Mouse Formula. The same formula used for successful breeding and raising of all Charles River animals.

Now offered to help you control an important research variable. Now offered to allow your animals' diet to be the same, from birth through experimentation.

Our formula is vitamin prefortified for pasteurization. Specially-shaped for maximum steam penetration. Clump-free after steam processing. Uniformly consistent, calibrated and regulated. And each 50-pound package is rupture-resistant under high vacuum steam processing.

Available soon to researchers everywhere from Country Best-Agway, Inc., through your local feed distributor. Charles River Breeding Laboratories, Inc., Wilmington, Massachusetts 01887.

---

Food for thought.
the $1195* Monochromator with "better than 1Å resolution"

We do not intend to praise the resolution of the Heath/Malmstadt-Enke EU-700 Monochromator by numbers. The optical performance of the "700" is better illustrated by the degree of separation of a typical first order profile of a 3131 Hg line and by the sharp, coma-free line produced from a copper hollow-cathode lamp, enabling you to judge its resolving power against the criteria you generally use.

If you think your Monochromator is as good as the "700" try the above tests on your instrument, compare them with the "700"... and see if you don't need a new Monochromator. The optical system is of the Czerny-Turner type with a focal length of 350 mm. To prevent aberration of the images and minimize coma, the "700" has parabolic mirrors, coated with MgF₂ for maximum reflectance in the UV. Image deterioration is virtually non-existent.

The plane diffraction grating features 1180 lines per mm and a blaze wavelength of 2500 Å. Continuously variable slits between 5 and 2000 microns have ground and polished knife edges with heights from 0.5 to 12 mm. Stray light is minimized by the use of high quality optical components. Special two-stage light baffles prevent off-axis light from entering or being dispersed.

All "700" Monochromators will produce the 0.3 Å resolution shown above, despite the fact that Heath conservatively states only "better than 1 Å." This high performance, versatile and stable Monochromator also features:

* ± 1 Å tracking accuracy
* Modular versatility integrates the "700" into a series of spectrophotometers available soon
* In-line entrance and exit beams
* Electronic Programmable Digital Scanning
* Wavelength: zero order to 10,000 Å
* High Mechanical Stability with portability... all for just $1195.

For more information on the "700" send for the NEW HEATH Scientific Instrumentation Catalog. A Manual is also available for $2.

SEEN THE LATEST COMPACTS?
This one is our Desk Model PHYSIOGRAPH, and it's the life science recorder you've been looking for.
Simple and compact, the Desk Model is a substantial piece of equipment that is rugged and precision engineered to accurately measure and record up to five physiological parameters simultaneously. In addition to four rectilinear or curvilinear recording channels, it features an optional servo channel for full chart width recording of a fifth parameter.
It would be easy for us to say that the PHYSIOGRAPH is rugged, student proof, reliable, flexible, etc. All these things are true. But leaving out cost (which is surprisingly low), the most impressive thing about our recorders is their over-all simplicity. They're amazingly easy to learn and easy to use. This simplicity of operation wasn't achieved at the expense of accuracy: this is demonstrated by the fact that PHYSIOGRAPHS are used in teaching and research applications in 49 states and in more than 36 overseas countries.
In addition to the complete selection of recorders, transducers, preamplifiers, and accessories, telemetry systems are available for studies of unrestrained subjects.
We're sold on the PHYSIOGRAPH system, just as thousands of our customers are. But then we're a little biased. May we demonstrate the Desk Model in your lab at your convenience? We think you'll be sold too. For a new PHYSIOGRAPH Catalog No. 107, write or call:

How do you get the highest resolution consistently in ion exchange chromatography?

Only by using Bio-Rad AG* resins!

Bio-RAD AG resins represent the highest level of purity available for ion exchange chromatography.

AG resins are exhaustively purified and sized to specific ranges to assure sharp resolution and highest reproducibility. For example, the maximum iron content in AG-1 anion resin is 0.0005%.

For the full story on Bio-RAD and its role in ion exchange technology—including valuable data on Bio-Rex resins, specialty resins, resin selection, regeneration and applications—send for our general catalog, Price List T.
Why doesn't somebody design an inverted microscope specifically for tissue culture and other biological studies?

Somebody has. It's the Wild M-40.

This is no modification. It's the newest, highest state-of-the-art in inverted microscope design and construction. In mechanical precision. In optical quality. And in conveniences, operating speed and ease.

It's the first of its kind, a typical Wild classic. Write for Booklet M-40.
PHASE SEPARATING PAPER

The world's first, fast-acting, disposable separatory funnel

Whatman No. 1 PS is a water repellent paper that acts as a phase separator in place of conventional separatory funnels... separates aqueous solutions from water immiscible solutions, quickly and conveniently. Because it's hydrophobic, No. 1 PS retains the aqueous layer while allowing the organic layer to go through... filters out any solid that may be present at the time of filtration... and, because it's paper, it's disposable.

No. 1 PS makes prior separation of the phases in a separatory funnel completely unnecessary... saves considerable time and effort in solvent extraction. It gives a complete and rapid quantitative separation of the two liquid phases. There is no loss of materials as with ordinary separatory funnels. Can be used with organic solvents that are lighter or heavier than water.

For further information, send for our free Phase Separating Paper Leaflet.

Announcing......

newly published and forthcoming titles from ANNUAL REVIEWS, INC., a nonprofit corporation, Palo Alto, California.

To be published: June 1969, Vol. 1
- ANNUAL REVIEW OF FLUID MECHANICS
  Editors: W. R. Sears, M. D. Van Dyke

To be published: November 1970, Vol. 1
- ANNUAL REVIEW OF ECOLOGY AND SYSTEMATICS

New Reviews in preparation:
- ANNUAL REVIEW OF EARTH SCIENCES
- ANNUAL REVIEW OF EDUCATIONAL RESEARCH
- ANNUAL REVIEW OF MATERIALS SCIENCE

Other REVIEWS:
- ANNUAL REVIEW OF ASTRONOMY AND ASTROPHYSICS
  Vol. 7, August 1969
- ANNUAL REVIEW OF BIOCHEMISTRY
  Vol. 38, July 1969
- ANNUAL REVIEW OF ENTOMOLOGY
  Vol. 14, January 1969
- ANNUAL REVIEW OF GENETICS
  Vol. 3, October 1969
- ANNUAL REVIEW OF MEDICINE
  Vol. 20, May 1969
- ANNUAL REVIEW OF MICROBIOLOGY
  Vol. 23, October 1969
- ANNUAL REVIEW OF NUCLEAR SCIENCE
  Vol. 19, December 1969
- ANNUAL REVIEW OF PHARMACOLOGY
  Vol. 9, April 1969
- ANNUAL REVIEW OF PHYSICAL CHEMISTRY
  Vol. 20, September 1969
- ANNUAL REVIEW OF PHYSIOLOGY
  Vol. 31, March 1969
- ANNUAL REVIEW OF PHYTOPATHOLOGY
  Vol. 7, November 1969
- ANNUAL REVIEW OF PLANT PHYSIOLOGY
  Vol. 20, June 1969
- ANNUAL REVIEW OF PSYCHOLOGY
  Vol. 20, January 1969

All volumes are clothbound, with subject, author, and cumulative indexes. Back volumes available.

For information on the contents and authors of the various publications of ANNUAL REVIEWS, INC. please send for free copy of 1969 Prospectus.

PRICE: $8.50 (USA) and $9.00 (elsewhere), postpaid, with the exception of the Annual Review of Biochemistry, which is $11.50 and $12.00, respectively. (Calif. residents subject to 5% sales tax.)

SCIENCE, VOL. 163

The logical step before and after column chromatography...

Concentration or Partition by Diaflo

Ultrafiltration

Diaflo Ultrafiltration permits rapid coarse fractionation prior to entry into the column, and subsequent re-concentration of eluates after chromatography. Diaflo membranes offer extremely high solvent flux rates and controlled solute retention characteristics. They are true molecular filters with cutoffs from 500 to 100,000 MW, and are non-denaturing and non-plugging. Complete Diaflo Systems are available to handle volumes from 1 ml to 20 or more liters... also larger scale industrial systems for continuous processing.

Measurement and Interpretation of Neutron Structure Factors

By B. T. M. WILLIS, University College, Cardiff.

Recent research on the magnetic and nuclear elastic scattering of thermal neutrons is reviewed by leading workers in the field, based on papers presented at an international summer school held at Harwell in July 1968 on Accuracy in Neutron Diffraction. This work has led to new information on the electronic and nuclear charge distributions in solids, and the book should be of interest to crystallographers, solid-state physicists, and chemists. 130 text figures. $9.60

The Roe Deer of Cranborne Chase

By RICHARD PRIOR. The growing importance of establishing and investigating the relationship between organisms and their environment is demon-strated in this volume. Every aspect of the natural history of a typical south-country community of roe deer is examined, and movement, feeding and population dynamics are described in detail. $7.00

A Stereotaxic Atlas of the Brain of the Cebus Monkey

By SOHAN L. MONOCHA, TOTADA R. SHANTHA, and GEOFFREY H. BOURNE, Emory University. Because of its intelligence and its more attractive personality the Cebus is an important alternative to the widely used Rhesus monkey for neuro-physiological and neuro-anatomical studies. This stereotaxic atlas of the brain of the Cebus provides details of all the important nuclei and fibre systems, with their co-ordinates. 72 plates, 2 text figures. $6.25

Nonlinear Differential Equations of

Quantum-Statistical Foundations of Chemical Kinetics

By SIDNEY GOLDEN. Brandeis University

1968 128 pp. paper $11.00

Physics:

AN INTRODUCTION
(Poets' Physics)

By ERNEST C. POLLARD. Pennsylvania State University, and DOUGLAS C. HUSTON, Skidmore College

1969 416 pp. illus. $8.50

An Introduction to Probability Theory

By P. A. P. MORAN. Australian National University, Canberra

1968 542 pp. $16.00

The Determination of Molecular Structure

SECOND EDITION

By P. J. WHEATLEY, Cambridge University

1968 280 pp. 155 illus. $10.00

An Introduction to the Chemistry of Carbohydrates

THIRD EDITION

By R. D. GUTHRIE, University of Sussex, and JOHN HONEYMAN, Shirley Institute, Manchester

1968 166 pp. 140 text figs. paper $4.50 cloth $7.20

DIFFICULT LAB JOBS

- CHEMICALLY INERT
- NON-CONTAMINATING
- LONG LIFE
- EASY TO CLEAN

GRiffin BEAKERS

Seamless stainless steel. Non-stick properties of Teflon® lining makes cleaning easy. In 8 sizes from 50 ml to 4000 ml capacity.

CHROMATOGRAPHY CLIPS

Assure firm grip to chromatograms on anti-siphon and holding rods. Smooth coating of chemically inert Teflon on jaws permits easy removal of wet chromatograms without damage.

SPEED MIXER

Teflon coated stainless steel mixer stirs and blends even the most viscous liquids. Smooth, quick, no splashing. 1¼ x 10½ long or 2½ x 10½ long.

Coatings to your specifications, any quantity and size. Send us your requirements.

WORKING WITH PROTEINS AND AMINO ACIDS

DEcAY TIME

+ SPECTRAL INFORMATION

= COMPLETE FLUOROMETRIC DATA

The TRW Decay Time Fluorometry System gives you accurate decay time over a broad range down to 1.7 nsec. Use it if your work is determining the structure of proteins, amino acids and other fluorescing compounds. Use it if you are studying fluorescing crystals, or the basic structure of molecules, or fluorescence quenching; or if you are measuring molecular volume.

One researcher told us he found that the $\tau$ of both tryptophan and tyrosine is 2.6 nsec, accurately measured with the TRW Decay Time Fluorometry System, not 10° as tentatively calculated by previous methods.

Write or call us for more information on this new decay time measuring technique.

"DIAL" ULTRA-THIN SECTIONS?

Precisely . . . since the new Reichert "Om U2" ultramicrotome is automated. Now you just dial for single or continuous ultra-thin sections for electron microscopy. With all controls dial or push-button operated, you merely "select" speed, sequence and thickness of sections. The completely inertia-free thermal advance of the "Om U2" represents a major breakthrough in ultramicrotomy.

The "Om U2" gives you the accuracy of the thermal advance and the advantages of a precision, mechanical advance in one instrument. The tedious task of producing useful ultra-thin sections is now a thing of the past.

Request literature and a free demonstration.

Cytologists: now prepare more slides in less time, with less fluid

The Shandon Cyto-Centrifuge employs a unique cell concentrating and distributing technique permitting you to prepare a large quantity of microscope slides using a smaller amount of human blood plasma, synovial fluid, peritoneal exudates, seminal or other body fluids. Centrifugation and slide preparation are performed simultaneously, which eliminates prior centrifugation and saves you time. Improved head design ensures safety when working with pathogenic organisms.

The Shandon Cyto-Centrifuge produces a monolayer of cells and does not damage individual cell structure. Also, processed slides can be rapidly scanned using a preset high power objective without adjustment between slides. Get the full story on the Cyto-Centrifuge and other quality scientific tools . . . write Shandon Scientific Company, Inc., 515 Broad Street, Sewickley, Pa. 15143 (Pittsburgh District).
