Potassium Ion Specific Electrode with High Selectivity for Potassium over Sodium: M. S. Frant and J. W. Ross, Jr. .................................................. 987
Placental Transfer of a Substituted Pteridine from Fetus to Mother: J. L. McNay and P. G. Dayton .................................................. 988
Environmental and Genetical Contributions to Class Difference: A Model Experiment: J. M. Thoday and J. B. Gibson .................................................. 990
Bladder Cancer Induction by Aromatic Amines: Role of N-Hydroxy Metabolites: J. L. Radomski and E. Brill .................................................. 992
Beta Glucuronidase Activity in Skin Components of Children with Cystic Fibrosis: G. E. Gibbs and G. D. Griffin .................................................. 993
Horseshoe Crab Lactate Dehydrogenase: Tissue Distribution and Molecular Weight: E. J. Massaro .................................................. 994
Production of Mouse Urinary Bladder Carcinomas by Sodium Cyclamate: G. T. Bryan and E. Erurk .................................................. 996
Proinsulin: Metabolic Effects in the Human Forearm: S. E. Fineberg and T. J. Merimee .................................................. 998
Somatic Association in Avena sativa L.: J. P. Dubuc and R. C. McGinnis .................................................. 999
Cerebral Hemorrhage in Relation to Birth Asphyxia: W. F. Winde .................................................. 1000
Neutrophils: Their Role in the Formation of a Tick Feeding Lesion: R. J. Tatchell and D. E. Moorhouse .................................................. 1002
Alanine: Key Role in Gluconeogenesis: P. Felig et al. .................................................. 1003
Alcohol, Amines, and Alkaloids: A Possible Biochemical Basis for Alcohol Addiction: V. E. Davis and M. J. Walsh .................................................. 1005
Cretinism in Rats: Enduring Behavioral Deficit Induced by Tricyanoaminopropene: J. W. Davenport .................................................. 1007
Directional Hearing: Effect of Unilateral Change of the Sound Duration: N. Y. Alexeenko .................................................. 1009
Unilateral Inhibition of Sound-Induced Convulsions in Mice: R. L. Collins .................................................. 1010

MEETINGS

Enzyme Regulation in Mammalian Tissues: G. Weber; Courses .................................................. 1018

COVER

Composite of uranium oxide and tungsten. The bright tungsten fibers are exposed because a thin layer of the oxide matrix was selectively etched away. The sample was not coated with a conductive layer and the emissive mode was used at a viewing angle of 0 degree. The composite was unidirectionally solidified in a modified floating zone process (X about 2300). See page 979. [R. J. Gerdes and A. T. Chapman, Georgia Institute of Technology; G. W. Clark, Oak Ridge National Laboratory]
