Potassium Ion Specific Electrode with High Selectivity for Potassium over Sodium: M. S. Frant and J. W. Ross, Jr. ................................................. 987

Placental Transfer of a Substituted Pyridine from Fetus to Mother: J. L. McNay and P. G. Dayton ............................................................ 988

Environmental and Genetical Contributions to Class Difference: A Model Experiment: J. M. Thoday and J. B. Gibson .............................. 990

Bladder Cancer Induction by Aromatic Amines: Role of N-Hydroxy Metabolites: J. L. Radomski and E. Brill ................................................. 992

Beta Glucuronidase Activity in Skin Components of Children with Cystic Fibrosis: G. E. Gibbs and G. D. Griffin ........................................ 993

Horseshoe Crab Lactate Dehydrogenase: Tissue Distribution and Molecular Weight: E. J. Massaro .............................................................. 994

Production of Mouse Urinary Bladder Carcinomas by Sodium Cyclamate: G. T. Bryan and E. Eriuk ............................................................ 996

Proinsulin: Metabolic Effects in the Human Forearm: S. E. Fineberg and T. J. Merimee .......................................................... 998

Somatic Association in Avena sativa L.: J. P. Dubuc and R. C. McGinnis .............................................................. 999

Cerebral Hemorrhage in Relation to Birth Asphyxia: W. F. Windle .............................................................. 1000

Neutrophils: Their Role in the Formation of a Tick Feeding Lesion: R. J. Tatchell and D. E. Moorhouse ...................................................... 1002

Alanine: Key Role in Gluconeogenesis: P. Felig et al. ......................................................................................... 1003

Alcohol, Amines, and Alkaloids: A Possible Biochemical Basis for Alcohol Addiction: V. E. Davis and M. J. Walsh ........................................ 1005

Cretinism in Rats: Enduring Behavioral Deficit Induced by Tricyanoaminopropene: J. W. Davenport ...................................................... 1007

Directional Hearing: Effect of Unilateral Change of the Sound Duration: N. Y. Alexenko .............................................................. 1009

Unilateral Inhibition of Sound-Induced Convulsions in Mice: R. L. Collins .............................................................. 1010

MEETINGS

Enzyme Regulation in Mammalian Tissues: G. Weber; Courses .............................................................. 1018

COVER

Composite of uranium oxide and tungsten. The bright tungsten fibers are exposed because a thin layer of the oxide matrix was selectively etched away. The sample was not coated with a conductive layer and the emissive mode was used at a viewing angle of 0 degree. The composite was unidirectionally solidified in a modified floating zone process (× about 2300). See page 979. [R. J. Gerdes and A. T. Chapman, Georgia Institute of Technology; G. W. Clark, Oak Ridge National Laboratory]
