Response of Olfactory Bulb Neurons to X-rays as a Function of Nasal Oxygen Concentration: G. P. Cooper .............................................. 1726
Spontaneous Rhythmic Contraction of Separated Heart Muscle Cells: S. Bloom ........ 1727
Persisting Circadian Rhythm of Cell Division in a Photosynthetic Mutant of Euglena: R. M. Jarrett and L. N. Edmunds, Jr. ......................... 1730
Senescence and Genetic Load: Evidence from Tribolium: R. R. Sokal ...................... 1733
Aurintricarboxylic Acid and Initiation Factors of Wheat Embryo: A. Marcus, J. D. Bewley, D. P. Weeks ........................................... 1735
Induction of Glutamine Synthetase in Embryonic Retina: Its Dependence on Cell Interactions: J. E. Morris and A. A. Moscona ..................... 1736
Pineal Gland: Dibutyryl Cyclic Adenosine Monophosphate Stimulation of Labeled Melatonin Production: D. C. Klein et al. ..................... 1738
Habituation and Dishabituation of the Gill-Withdrawal Reflex in Aplysia: H. Pinsker, I. Kupfermann, V. Castellucci, E. Kandel ....................... 1740
Neuronal Correlates of Habituation and Dishabituation of the Gill-Withdrawal Reflex in Aplysia: I. Kupfermann, V. Castellucci, H. Pinsker, E. Kandel .............................................. 1743
Alkaloids from Catecholamines in Adrenal Tissue: Possible Role in Alcoholism: G. Cohen and M. Collins ............................................. 1749
Physiological Effects of Transcendental Meditation: R. K. Wallace ..................... 1751
Paradoxical Sleep in Two Species of Avian Predator (Falconiformes): J. A. Rojas-Ramírez and E. S. Tauber ........................................... 1754
Errata for the Moon Issue (30 January 1970) ........................................ 1758

MEETINGS

Fish Stocks: Biochemical and Serological Identification: A. E. Mourant; Bioelectrical Impedance: L. A. Geddes; Inelastic Behavior of Solids: M. F. Kanninen et al. ............................................. 1760

The American Association for the Advancement of Science was founded in 1848 and incorporated in 1874. Its objects are to further the work of scientists, to facilitate cooperation among them, to improve the effectiveness of science in the promotion of human welfare, and to increase public understanding and appreciation of the importance and promise of the methods of science in human progress.

COVER

View of Washington Cathedral taken from the west end of the nave and showing the deviation of about 2 degrees of the nave axis from the axis of the choir at the east end. The architect intentionally designed this deviation, one of many in the cathedral, to enhance the visual effect. See letter by R. T. Feller, page 1669. [Gary Laurish Photography, Washington, D.C.]
