Polymeric Structure of Spruce Lignin: H. I. Bolker and H. S. Brenner
Lysopine and Octopine Promote Crown-Gall Tumor Growth in vivo: J. A. Lippincott and B. B. Lippincott
Flour Beetles: Responses to Extracts of Their Own Pupae: M. F. Ryan, T. Park, D. B. Meritz
Genetic Inactivation of the α-Galactosidase Locus in Carriers of Fabry’s Disease: G. Romeo and B. R. Migeon
Antitumor Activity in Mice of Tentacles of Two Tropical Sea Annelids: F. L. Tabrah, M. Kashwagi, T. R. Norton
Sex Ratio of Newborns: Preponderance of Males in Toxemia of Pregnancy: P. Toivinen and T. Hirvonen
Adenosine 3',5'-Monophosphate in Rat Pineal Gland: Increase Induced by Light: M. S. Ebadi, B. Weiss, E. Costa
Extraretinal Light Perception: Entrainment of the Biological Clock Controlling Lizard Locomotor Activity: H. Underwood and M. Menaker
Reinnervated Eye Muscles Do Not Respond to Impulses in Foreign Nerves: R. F. Mark, L. R. Marotte, J. R. Johnstone
Cardiac Responses on the Visual Cliff in Prelocomotor Human Infants: J. J. Campos, A. Langer, A. Krowitz
Temporal Summation Phenomena at Threshold: Their Relation to Visual Mechanisms: J. L. Zacks
Women in Science: J. E. Simmons

The American Association for the Advancement of Science was founded in 1848 and incorporated in 1874. Its objects are to further the work of scientists, to facilitate cooperation among them, to improve the effectiveness of science in the promotion of human welfare, and to increase public understanding and appreciation of the importance and promise of the methods of science in human progress.

COVER

Cloud on 19 May 1968 that is growing explosively 13 minutes after having been seeded with silver iodide pyrotechnics. Height of the cloud top is 11.5 kilometers enroute to a maximum height of approximately 12.5 kilometers. Picture was taken from a DC-6 aircraft flying at 6.1 kilometers over southern Florida. See page 127. [Environmental Science Services Administration Research Laboratories, Coral Gables, Florida]
