**Personnel Placement**

**POSITIONS WANTED**

**Allied Health Sciences**

Ph.D. Senior Scientist. Extensive experience both teaching and administration in all paramedical areas. Currently Dean. Available 1 July 1971, Box 246, SCiENCE, 6/25, 7/2

**Comparative Anatomist, Ph.D.** (Zoology): 26. New Assistant Professor of Anatomy in Medical School. Desires teaching-research position in Zoology. Box 261, SCiENCE X

**Japanese into English**. Medicine, biochemistry, pharmacology, prompt, accurate, $35 per 1000. English words. American. Tokyo International P.O. Box 5328, Tokyo, Japan. 6/25, 7/2, 9

**Pharmacologist**.

**Physiologist**.

31, dynamic. Seeks teaching and/or administrative position in small college or university. Many publications, including graduate and undergraduate text books. Experience includes teaching graduate and non-science. Adjunct professor status at leading university and nine years governmental research and administrative experience. Box 202, SCiENCE.

**POSITIONS OPEN**

**FOOD AND DRUG ADMINISTRATION IS SEEKING**

**Pathologist—M.D. or D.V.M.** with experience or interest in small animal pathology for openings involving collaborative and independent research in toxicological testing.

Salary to $24,285 for staff appointment and $25,867 for supervisory position. Excellent federal benefits; professional development programs; equal opportunity; U.S. citizenship required. Position located in Washington, D.C.; major relocation expenses reimbursed.

Submit curriculum vitae to:

Morris Weinberger, M.D., Director,
Division of Pathology
Food and Drug Administration
200 C Street, S.W.
Washington, D.C. 20204

Phone: 202-962-3928

---

**The University of Melbourne—Australia**

**CHAIR OF PHYSIOLOGY**

Applications are invited for appointment to the Chair of Physiology which has become vacant on the resignation of Professor R. D. Wright. This Chair is one of two Chairs in the Department of Physiology.

Salary: $A15,900 per annum.

Further information, including details of application procedure, superannuation, travel and removal expenses, housing assistance and conditions of appointment, is available from the Registrar. All correspondence (marked confidential) should be addressed to:

The Registrar
The University of Melbourne
Parkville, Victoria 3052, Australia
Applications close on 16 August 1971.

---

**UNIVERSITY OF OTAGO**

**Dunedin, New Zealand**

**LECTURER OR SENIOR LECTURER IN ANATOMY**

Applications are invited from suitably qualified persons for appointments as Lecturer/Senior Lecturer in Anatomy. Applications from graduates with teaching and research experience in cytology and histology of histology, or embryology including development, and biological, or neuroanatomy will be welcome.

The Department has excellent facilities for electron microscopy and some preference may be given to candidates with experience in this field. Salary according to qualifications and experience within the following scales:

**Science Graduate:**

Lecturer: $NZ2450 $200 to $5500 per annum

Senior Lecturer: $NZ5600 $200 to $7500 per annum with a bar at $6600 per annum

**Medical Graduate:**

Lecturer: $NZ5353 $7639 with a bar at $6291 per annum

Senior Lecturer: $NZ7886 $9101 per annum

(Notes: $NZ100 equals £46.67 stg; $US112; $A100)

Academic salary scales are subject to regular cost-of-living increases and to triennial review. An adjustment is expected shortly.

Promotion to the grade of Senior Lecturer is normally considered when the lecturer reaches the maximum for that grade.

A particularly well-qualified candidate could be appointed at the grade of Associate Professor at a salary within the range $NZ9,000-$12,000 (Science Graduate), or $NZ9,550-$10,281 (Medical Graduate).

The post in cytology and histology is available for a 2-year term and an appointment with return of the student paid could be negotiated. With the increased pre-clinical student intake, however, this position may well become a permanent one.

Further particulars should be obtained from the Secretary-General, Association of Commonwealth Universities (A.C.U.), 36 Gordon Square, London WC1H OFF (Tel: 01-387 8572) or from the Registrar of the University. Applications close in New Zealand and London on 31 July 1971.

---

**Microbiologist, Ph.D.**

We need an experienced Ph.D. to establish a clinical and research microbiology laboratory. He must be capable of providing the management, direction and foresight to allow Instrumentation Laboratory Inc. to become a leader in the new field of automation in clinical microbiology.

This Ph.D. must have previous work in bacterial physiology, and, ideally, would have some training in biochemistry and immunology. He should be interested in instrumentation.

This is an unusual opportunity, which should allow significant contributions to be made in solving the automation problems of the bacteriology laboratory.

Please send resume in confidence to: John O'Sullivan

**Instrumentation Laboratory Inc.**

Instructions for Contributors

The Editors of Science

Manuscripts submitted to Science for consideration for publication can be handled expeditiously if they are prepared in the form described in these instructions.

Submit an original and two duplicates of each manuscript. With the manuscript send a letter of transmittal giving (i) the name(s) of the author(s); (ii) the title of the paper and a one- or two-sentence statement of its main point; (iii) the name, address, and field of interest of four to six persons in North America but outside your institution who you think are qualified to act as referees for your paper; (iv) the names of colleagues who have reviewed your paper for you; (v) the field(s) of interest of readers who you anticipate will wish to read your paper.

Editorial Policies

All papers submitted are considered for publication. The author’s membership or lack of membership in the AAAS is not a factor in selection. Papers are accepted with the understanding that they have not been published, submitted, or accepted for publication elsewhere. Authors will usually be notified of acceptance, rejection, or need for revision in 4 to 6 weeks (Reports) or 6 to 10 weeks (Articles).

Types of papers. Five types of signed papers are published: Articles, Reports, Letters, Technical Comments, and Book Reviews. Familiarize yourself with the general form of the type of paper you wish to submit by looking over a recent issue of the journal, and then follow the instructions for that type of paper.

Reviews. Almost all Articles, Reports, and Technical Comments, whether solicited or not, are sent to two or more outside referees for evaluation of their significance and soundness. Forms showing some of the criteria reviewers are expected to consider are available on request.

Editing. Papers are edited to improve the effectiveness of communication between the author and his readers. The most important goal is to eliminate ambiguities. In addition, improvement of sentence structure often permits readers to absorb salient ideas quickly. When editing is extensive, with consequent danger of altered meanings, papers are returned to the author for correction and approval before type is set. Authors are free to make additional changes at this stage.

Proofs. One set of galley proofs or an equivalent is provided for each paper. Keep alterations to a minimum, and mark them only on the galley, not on the manuscript. Extensive alterations may delay publication by 2 to 4 weeks.

Reprints. An order blank for reprints accompanies proofs.

Writing Papers

Organize your material carefully, putting the news of your finding or a statement of the problem first, supporting details and arguments second. Make sure that the significance of your work will be apparent to readers outside your field, even if you feel you are explaining too much to your colleagues. Present each step in terms of the purpose it serves in supporting your finding or solving the problem. Avoid chronological steps, for the purpose of the steps may not be clear to the reader until he finishes reading the paper.

Provide enough details of method and equipment so that another worker can repeat your work, but omit minute and comprehensive details which are generally known or which can be covered by citation of another paper. Use metric units of measure. If measurements were made in English units, give metric equivalents.

Avoid specialized laboratory jargon and abbreviations, but use technical terms as necessary, defining those likely to be known only in your field. Readers will skip a paper they do not understand. They should not be expected to consult a technical dictionary.

Choose the active voice more often than you choose the passive. For the passive voice usually requires more words and often obscures the agent of action. Use first person, not third; do not use first person plural when singular is appropriate. Use a good general style manual, not a specialty style manual. The University of Chicago style manual, the style manual of the American Institute of Physics, and the Style Manual for Biological Journals, among others, are appropriate.

Manuscripts

Prepare your manuscript in the form used by Science. Use bond paper for the first copy. Submit two duplicates. Double-space title, abstract, text, signature, address, references (including the lines of a single reference), figure legends, and tables (including titles, columns, headings, body, and footnotes). Do not use single spacing anywhere. Put the name of the first author and the page number in the upper right-hand corner of every page.

Paging. Use a separate page for the title; number it page 1. Begin each major section—text, references and notes, and figure legends—on a new sheet. Put each table on a separate sheet. Place figure legends and tables after the references.

Title. Begin the title with a word useful in indexing and information retrieval (not “Effect” or “New”).

References and Notes. Number all references to the literature, footnotes, and acknowledgments in a single sequence in the order in which they are cited in the text. Gather all acknowledgments into a single citation, and keep them short (“I thank” , not “I wish to thank”). Cite all references and notes but do not cite them in titles or abstracts. Cite several under one number when feasible. Use Access—Key to the Source Literature of the Chemical Sciences with the few suggested revisions in International List of Periodical Title Word Abbreviations for abbreviations of journal names. If the journal is not listed there, provide the full name. Use the following forms:

Illustrations. Submit three copies of each diagram, graph, map, or photograph. Cite all illustrations in the text and provide a brief legend, to be set in type, for each. Do not combine line
drawings and photographs in one illustration. Do not incorporate the legend in the figure itself. Use India ink and heavy white paper or blue-lined coordinate paper for line drawings and graphs. Use heavier lines for curves than you use for axes. Place labels parallel to the axes, using capital and lower-case letters; put units of measurement in parentheses after the label—for example, Time (sec). Plan your figures for the smallest possible printed size consistent with clarity.

Photographs should have a glossy finish, with sharp contrast between black and white areas. Indicate magnification with a scale line on the photograph.

*Tables.* Type each table on a separate sheet, number it with an arabic numeral, give it a title, and cite it in the text. Double space throughout. Give each column a heading. Indicate units of measure in parentheses in the heading for each column. Do not change the unit of measure within a column. Do not use vertical rules. Do not use horizontal rules other than those in the heading and at the bottom. A column containing data readily calculated from data given in other columns can usually be omitted; if such a column provides essential data, the columns containing the other data can usually be omitted.

Plan your table for small size. A one-column table may be up to 42 characters wide. Count characters by counting the widest entry in each table column (whether in the body or the heading) and allow three characters for spaces between table columns. A two-column table may be 90 characters wide.

*Equations and Formulas.* Use quadruple spacing around all equations and formulas that are to be set off from the text. Most should be set off. Start them at the left margin. Use the solids for simple fractions, adding the necessary parentheses. But if braces and brackets are required, use built-up fractions. Identify handwritten symbols in the margin, and give the meaning of all symbols and variables in the text immediately after the equation.

*Articles.*

Articles, both solicited and unsolicited, may range in length from 2000 to 5000 words (up to 20 manuscript pages). Write them clearly in reasonably nontechnical language. Provide a title of one or two lines of up to 26 characters per line and a subtitle consisting of a complete sentence in two lines with a character count between 95 and 105 for the sentence (spaces between words count as one character each). Do not break words at the ends of lines. Write a brief author note, giving your position and address. Do not include acknowledgments. Place title, subtitle, and author note on page 1. Begin the text on page 2.

Do not submit more than one illustration (table or figure) for each 4 manuscript pages unless you have planned carefully for grouping. With such planning many illustrations can be accommodated in the article. Consult the editorial office for help in planning.

*Reports.*

Short reports of current research results may vary in length from one to six double-spaced manuscript pages of text. The shorter papers receive preferred treatment. Limit illustrative material (both tables and figures) to one item for each three manuscript pages. Three items is the maximum. A research report should have news value for the scientific community or be of unusual interest to the specialist or of broad interest because of its interdisciplinary nature. It should contain solid research results or reliable theoretical calculations. Speculations should be limited and is permissible only when accompanied by solid work.

*Title.* Begin the title with an important word (preferably a noun) that is likely to be useful to indexers. The title may be a conventional one (composed primarily of nouns and adjectives), a sentence (containing a verb) or a structure with a colon (Nictitating Membrane: Classical Conditioning and Extinction in the Albino Rabbit). Limit it to three lines of complete words of no more than 32 characters per line (spaces between words count as one character each). Do not use abbreviations. Type the title in the middle of page 1.

*Abstract.* Provide an abstract of 45 to 55 words on page 2. The abstract should amplify the title but should not repeat it or phrases in it. Qualifying words for terms used in the title may be used. Tell the results of the work, but not in terms such as "was found," "is described," or "is presented."

*Text.* Begin the text on page 3. Put the news first. Do not refer to unpublished work or discuss your plans for further work. If your paper is a short report of work covered in a longer paper to be published in a specialty journal, you may refer to this paper if it has been accepted. Name the journal. If the manuscript has not been accepted, refer to it as "in preparation." Omit references to private communications. Do not use subheads.

*Signature.* List the authors on the last page of the text and give a simple mailing address.

*Received dates.* Each report will be dated the day an acceptable version is received in the editorial office.

*Letters.*

The *Letters* section provides a forum for discussion of matters of general interest to scientists. Letters are judged only on clarity of expression and interest. Keep them short and to the point; the preferred length is 250 words. The editors frequently shorten letters.

*Technical Comments.*

Letters concerning technical papers in *Science* are published as Technical Comments at the end of the Reports section. They may add information or point out deficiencies. Reviews are obtained before acceptance.

*Book Reviews.*

The selection of books to be reviewed is made by the editors with the help of advisers in the various specialties; arrangements are then made with reviewers. A sheet of instructions accompanies each book when it is sent to the reviewer.

*Cover Photographs.*

Particularly good photographs suitable for use on the cover are desired.
