Intercocular Apparent Movement in Depth: A Motion Preference Effect: S. H. Ferris and N. Pastore 305

Extremely Rapid Visual Search: The Maximum Rate of Scanning Letters for the Presence of a Numeral: G. Sperling et al. 307

Pineal Function in Sparrows: Circadian Rhythms and Body Temperature: S. Binkley, E. Klith, M. Menaker 311

ASSOCIATION AFFAIRS

COVER

One of ten elements of the ring-array antenna used for ionospheric modification experiments near Boulder, Colorado. The entire antenna occupies a circular area 110 meters in diameter. The antenna elements are crossed, conical dipoles. See page 245. [Friedrich Hoezl, National Oceanic and Atmospheric Administration, Boulder, Colorado]
