CONFERENCE OFFICER

The American Association for the Advancement of Science was founded in 1848 and incorporated in
1874. Its objects are to further the work of scientists, to facilitate cooperation among them, to
improve the effectiveness of science in the promotion of human welfare, and to increase public under-
standing and appreciation of the importance and promise of the methods of science in human progress.

COVER

One of ten elements of the ring-array antenna used for ionospheric modification experiments near Boulder, Colorado. The entire antenna occupies a circular area 110 meters in diameter. The antenna elements are crossed, conical dipoles. See page 245. [Friedrich Hoezl, National Oceanic and Atmospheric Administration, Boulder, Colorado]
