SCIENCE is published weekly, except with an extra issue on the third Tuesday in November, by the American Association for the Advancement of Science, 1515 Massachusetts Ave., NW, Washington, D.C. 20005. Annual subscription $20; foreign postage: Americas $3; overseas $5; air freight to Europe, North Africa, near East $10; single copies $1 (back issues, $5) except Guide to Scientific Instruments which is $2. School year subscription: 9 months, $15; 10 months, $15.75. Provide 4 weeks notice of change of address, giving new and old address and zip codes. Send a recent address label. SCIENCE is indexed in the Reader's Guide to Periodical Literature.

Synthetic Strands of Cardiac Muscle: Growth and Physiological Implication: M. Lieberman et al. 909
Δ⁶-Tetrahydrocannabinol: Aversive Effects in Rat at High Doses: T. F. Elsmore and G. V. Fletcher 911
Rod-Cone Interaction in Human Scotopic Vision: T. E. Frumkes, M. D. Sekuler, E. H. Reiss 913
Twins: Early Mental Development: R. S. Wilson 914

Embryonic chick heart cells (trypsin disaggregated) were growth oriented in tissue culture for 8 days and formed a “heart”-shaped, synthetic strand of cardiac muscle. The preparation was fixed in Bouin's fluid and stained with phosphotungstic acid–hematoxylin (about × 6.8). See page 909. [Thurman Ellis, Duke University Medical Center, Durham, North Carolina]
