Gene Therapy: E. Freese ..................................................................... 1024

The American Association for the Advancement of Science was founded in 1848 and incorporated in 1874. Its objects are to further the work of scientists, to facilitate cooperation among them, to improve the effectiveness of science in the promotion of human welfare, and to increase public understanding and appreciation of the importance and promise of the methods of science in human progress.

COVER

Acrylic casting of blood vessels in paw of gray wolf. Circulation in the paw and toe pads is almost entirely in cutaneous plexuses. Flow of blood in arteries is into the center of plexuses; flow in veins is from the peripheries (about ×1.7). See page 988. [R. E. Henshaw, Pennsylvania State University, University Park]
