The American Association for the Advancement of Science was founded in 1848 and incorporated in
1874. Its objects are to further the work of scientists, to facilitate cooperation among them, to
improve the effectiveness of science in the promotion of human welfare, and to increase public under-
standing and appreciation of the importance and promise of the methods of science in human progress.

COVER
End view of a flame burning horizontally on a porous plug burner (2.5 centimeters in diameter). A
focused laser beam is passing vertically through the flame for Raman scattering experiments. See page
