MEETINGS
Prostaglandins in Fertility Control: S. Bergström et al.; Forthcoming Events .......................................................................................... 1280

COVER
Flat, molded figurines with forward-jutting feet and prominent teeth (often stylishly mutilated) were made around A.D. 800 in highland central Mexico. This figurine was excavated in 1969 at the Cerro de Xochitecatl, Tlaxcala, by Bodo Spranz, under the auspices of the Deutsche Forschungsgemeinschaft (actual size, about 20 centimeters high). See page 1208. [Don E. Dumond, University of Oregon, Eugene]
