MEETINGS

Meeting Schedule

American Association for the Advancement of Science

Cross section (25 μm) of leaf of saltbush (about × 300). (Insert) Great Basin or chisel-toothed rat on the top of a spiny saltbush. Most kangaroo rats forage for seeds in the soil, but this species is an aboreal leaf forager. See page 1094. [G. J. Kenagy, University of California, Los Angeles]
