Products and Materials .................................................. 1258

MEETINGS
Modeling of Photochemical Smog: M. C. Dodge .................. 1259

COVER
Comparison of the skeletons of the lion (Felis leo) and bobcat (Lynx rufus) to the same scale. Although corresponding bones in the two animals are grossly similar, each bone of the bobcat (foreground) is relatively more slender than that of the lion. See page 1201. [T. A. McMahon, Harvard University]
