PHYSIOLOGIST-TOXICOLOGIST

Excellent opportunity to join research staff of leading manufacturer in health care industry. You will be responsible for carrying out animal studies necessary to establish function and safety of new hospital products and for innovative contributions to their design. To qualify you must have a Ph.D. in physiology, toxicology, or pharmacology. Some experience conducting pathological studies in animals and be capable of assuming full project responsibility. This position offers an attractive starting salary, excellent benefit package and professional working atmosphere at our health products research center in Barrington, Illinois. Please send resume in confidence including salary history to:

Mrs. J. Klappau

SUPervISING ENVIronmental MICROBIologist

Large public service agency seeks a mature, experienced Environmental Microbiologist to supervise research and control work of all activities in microbiology. The successful candidate will supervise varied, specialized, and very difficult microbiological examinations for detection and identification of microorganisms related to sewage treatment and disposal. Will initiate, direct, and determine scope and character of tests, investigations and studies of the biological aspects of stream pollution, industrial waste disposal and sewage treatment processes. Will prepare research reports, progress reports, time reports, performance evaluations, expense accounts, and budget estimates for the microbiology section. Will direct work of subordinate Microbiologists and supervise training of subprofessional laboratory personnel and perform related technical, supervisory activities.

Candidates should possess a M.S. degree (Ph.D. preferable) in microbiology and five years professional experience including one year with supervisory responsibilities. Current starting salary is $18,500. Salary review after six months. Free medical and life insurance are among excellent benefits. This is a civil service position requiring preferential selection. Interested applicants are invited to submit detailed resumes to:

NATIONAL CHEMICAL EXPOSITION

In Liquid scintillation counting of 14C or 3H labeled compounds such as inulin, dextran, and mannitol, inconsistent experimental results and decreased count rates have frequently occurred. Samples prepared using an Aquasol® technique have been shown to be stable for six months or longer and have shown only an insignificant reduction in count rate during this period.

AQUASOL® NEF-934. $46/4 liters $166/4x4 liters

New England Nuclear
575 Albany Street Boston, Mass. 02118
Customer service: 617/482-9995
POSITIONS WANTED

Bioorganic Chemist, Ph.D., 1971, bulky phosphine ligands in molecules, presently DNA-nucleic acid affinity of antimonial platinum compounds and Cu enzyme purification. Box 120, Biological Psychology,才干 Genetist, Ph.D., Biological psychology, emotional behavior. Comparative psychology, sensory behavior. Publications on CNS reactivity, seeks academic and/or research position. Robert A. Schreiber, Department of Biochemistry, MUS, Charleston, S.C. 29401.

Biologist Chairmanship or Professorship sought by Dr. C. Ross, D.D.S., 1946, with interest in genetics, embryology, behavior, molecular biology, biometrics. Broadly experienced teacher-researcher with many grants, publications, graduate students, seeks challenge in administration or innovative teaching. Box 333, SCIENCE.

Cell Biologist-Elctron Microscopist, Ph.D. Five years of broad teaching experience, outstanding teacher, expects to continue research program involving graduate and graduate students. Sought position in department dedicated to quality instruction and faculty development, would consider chairmanship in a proper administrative atmosphere. Box 334, SCIENCE.

Immunologist, Ph.D., postdoctoral experience in a non-profit, Gannet Cancer Foundation, all aspects immunology, radiometric, electrophoretic, and so forth; several publications. Must be available to teach at least one course, would like to negotiate salary, university will relocate. Box 335, SCIENCE.

Ph. D. Medical Microbiology/Immunology (1971), seeks clinical laboratory and/or research teaching position. Two years postdoctoral immunology, 4 years' clinical laboratory (all areas), supervisory experience. Box 336, SCIENCE.

Microbiologist, Ph.D. Broad administrative and scientific experience in all phases of pharmaceutical R & D, specializing in oral and topical antimicrobials. Additional significant experience in biological quality control and in food microbiology. Desires teaching position at small college or university or industrial position. Box 338, SCIENCE.

Microbiologist/Biochemist, Ph.D. 1953, teaching experience-emeritus microbiology, microbial physiology, microbial genetics. Publications in JACS, J. Biol. Chem. Desires teaching position at small college or university. Box 339, SCIENCE.

Psychologist, Ph.D., 29, 4½ years' experience in applied clinical, human behavior measurement, and psychobiological research, clinically qualified, university cross-appointed. Eighteen papers. Salary and location open. Box 339, SCIENCE.

Quantitative Experimental Psychologist, Ph.D. Three years of college teaching plus 4 years of research experience. Nineteen publications in human information processing and vision. Research or teaching or research position desired where more rigorous stimulation of on-line experimental control. Frederick N. Dyer, Experimental Psychology Division, USAMRL, Ft. Knox, Ky. 40121.

POSITIONS OPEN

UNIVERSITY OF ALBERTA

FACULTY OF DENTISTRY

ASSISTANT PROFESSOR OF ANATOMY—Ph.D. with at least 2 years of postdoctoral teaching in Medical Gross Anatomy required. To teach undergraduate and graduate level courses; independent research encouraged. Available 1 July 1973. Send curriculum vitae and statement of research interests before 10 July to: Chairman, Search Committee, University of South Dakota, Vermillion, South Dakota 57069. Equal Opportunity Employer.

FACULTY POSITIONS IN BIOCHEMISTRY

In accord with affirmative action and University policy, St. Louis University College of Medicine is inviting applications from well-qualified Ph.D.'s with postdoctoral training in the fields of membrane biochemistry, physiological chemistry, lipid biochemistry or molecular biology. Initial appointment will be at the rank of assistant or associate professor of biochemistry. An ongoing research program or clear program proposal is essential. Good salary; initial research support are available. The Department is responsible for hiring on the basis of merit.

Interested persons are asked to submit curricula vitae to Dr. W. N. Lomonosov, School of Medicine, St. Louis University, 1440 S. Grand Ave, St. Louis, Missouri 63104.

ASSISTANT PROFESSOR OF BIOLOGY

Ph.D., September 1973. To teach courses in general, introductory and embryological evolution. Active research involvement essential. Prefer professor or associate professor with radiobiology experience. Send curriculum vitae and list of references to Dr. Gilbert Sanchez, Biology Department, New Mexico Tech, Socorro, New Mexico 87080.

POSTDOCTORAL CELL BIOLOGIST/ ELECTRON MICROSCOPIST

To investigate the effects of pollutants on the lungs; will involve morphometry and all aspects of tissue microscopy and histology. Applicants must submit letter of recommendation to Dr. E. S. Boehtman, Department of Environmental Health, School of Public Health and Tropical Hygiene, University of Washington, Seattle, Washington 98195.

FACULTY POSITION: A senior level appointment for an experienced individual with an active research program in the field of animal virology. Specialization in viral molecular biology, serology, and/or electron microscopy. Experience with RNA virus replication is sought. Teaching responsibilities include instruction in the graduate and undergraduate levels. Reply to Chairman, Department of Microbiology, Health Sciences Center, State University of New York, Stony Brook, New York 11790.

The Health Sciences Center is an equal opportunity employer and applications from members of minority groups or women are welcome.

An assistant professorship is open for a person with a doctorate in FOOD SCIENCE or related fields with research and teaching experience. Teaching will involve the whole field of sensory quality and its evaluation. Research will involve the whole field of sensory quality and its evaluation. Original and competitive research will be emphasized in wine and brandy quality. Capabilities in statistical techniques and computer processing of data, sensory panel management, and correlations of chemical data with sensory characteristics are essential. Letters of inquiry, applications with personal qualifications, and names of suggested references should be sent to: Chairman, Department of Viticulture and Enology, University of California, Davis, Calif. 95616.

The University of California is an equal opportunity employer.

UNIVERSITY OF MASSACHUSETTS/AMHERST

Remote Sensing and photogeology specialist with B.S., background in geology needed for Fall 1973. Must teach other specialties, possibly introductory course. Curriculum vitae to Professor A. Acton, Department of Geology and Geography, University of Massachusetts, Amherst, Massachusetts 01002. A Nondiscrimination Affirmative Action Employer.

FELLOWSHIP

Postdoctoral Fellowship in Neuroscience offers the opportunity for original investigations into brain mechanisms and behavior (with emphasis on vision and visual pathways) as it relates to altered states of consciousness. Some teaching in Neuroscience program. Research experience a plus. Salary $14,000 plus. Send curriculum vitae and references to: Dr. E. R. Friedman, Jr., Chairman, Department of Psychology, Colgate University, Hamilton, New York 13346.

UNIVERSITY OF CHICAGO

MULTIVARIATE ANALYSIS OF QUALITATIVE DATA TRAINING SESSION

August 22-26, 1973

Study in this session will focus on two powerful computer programs for the analysis of qualitative data by log-linear models. The session will include lectures, study groups, and computer laboratory work. Write: Office of Continuing Education, University of Chicago, 5355 S. Kimbark Avenue, Chicago, Illinois 60637.

Instructions for Contributors

The Editors of Science

Manuscripts submitted to Science for consideration for publication can be handled expeditiously if they are prepared in the form described in these instructions.

Submit an original and two duplicates of each manuscript. With the manuscript send a letter of transmittal giving (i) the name(s) of the author(s); (ii) the title of the paper and a one- or two-sentence statement of its main point; (iii) the name, address, and field of interest of four to six persons in North America but outside your institution who you think are qualified to act as referees for your paper; (iv) the names of colleagues who have reviewed your paper for you; (v) the field(s) of interest of readers who you anticipate will wish to read your paper.

Editorial Policies

All papers submitted are considered for publication. The author's membership or lack of membership in the AAAS is not a factor in selection. Papers are accepted with the understanding that they have not been published, submitted, or accepted for publication elsewhere. Authors will usually be notified of acceptance, rejection, or need for revision in 4 to 6 weeks (Reports) or 6 to 10 weeks (Articles).

Types of papers. Five types of signed papers are published: Articles, Reports, Letters, Technical Comments, and Book Reviews. Familiarize yourself with the general form of the type of paper you wish to submit by looking over a recent issue of the journal, and then follow the instructions for that type of paper.

Reviews. Almost all Articles, Reports, and Technical Comments, whether solicited or not, are sent to two or more outside referees for evaluation of their significance and soundness. Forms showing some of the criteria reviewers are expected to consider are available on request.

Editing. Papers are edited to improve the effectiveness of communication between the author and his readers. The most important goal is to eliminate ambiguities. In addition, improvement of sentence structure often permits readers to absorb salient ideas quickly. When editing is extensive, with consequent danger of altered meanings, papers are returned to the author for correction and approval before type is set. Authors are free to make additional changes at this stage.

Proofs. One set of galley proofs or an equivalent is provided for each paper. Keep alterations to a minimum, and mark them only on the galley, not on the manuscript. Extensive alterations may delay publication by 2 to 4 weeks.

Reprints. An order blank for reprints accompanies proofs.

Writing Papers

Organize your material carefully, putting the news of your finding or a statement of the problem first, supporting details and arguments second. Make sure that the significance of your work will be apparent to readers outside your field, even if you feel you are explaining too much to your colleagues. Present each step in terms of the purpose it serves in supporting your finding or solving the problem. Avoid chronological steps, for the purpose of the steps may not be clear to the reader until he finishes reading the paper.

Provide enough details of method and equipment so that another worker can repeat your work, but omit minute and comprehensive details which are generally known or which can be covered by citation of another paper. Use metric units of measure. If measurements were made in English units, give metric equivalents.

Avoid specialized laboratory jargon and abbreviations, but use technical terms as necessary, defining those likely to be known only in your field. Readers will skip a paper they do not understand. They should not be expected to consult a technical dictionary.

Choose the active voice more often than you choose the passive, for the passive voice usually requires more words and often obscures the agent of action. Use first person, not third; do not use first person plural when singular is appropriate. Use a good general style manual, not a specialty style manual. The University of Chicago style manual, the style manual of the American Institute of Physics, and the Style Manual for Biological Journals, among others, are appropriate.

Manuscripts

Prepare your manuscript in the form used by Science. Use bond paper for the first copy. Submit two duplicates. Double-space title, abstracts, text, signature, address, references (including the lines of a single reference), figure legends, and tables (including titles, columns, headings, body, and footnotes). Do not use single spacing anywhere. Put the name of the first author and the page number in the upper right-hand corner of every page.

Paging. Use a separate page for the title; number it page 1. Begin each major section—text, references and notes, and figure legends—on a new sheet. Place each table on a separate sheet. Place figure legends and tables after the references.

Title. Begin the title with a word useful in indexing and information retrieval (not "Effect" or "New").

References and Notes. Number all references to the literature, footnotes, and acknowledgments in a single sequence in the order in which they are cited in the text. Gather all acknowledgments into a single citation, and keep them short ("I thank," not "I wish to thank"). Cite all references and notes but do not cite them in titles or abstracts. Cite several under one number when feasible. Use the "Chemical Abstracts Service Source Index," CASSI, with the few suggested revisions in International List of Periodical Title Word Abbreviations for abbreviations of journal names. If the journal is not listed there, provide the full name. Use the following forms:

Illustrations. Submit three copies of each diagram, graph, map, or photograph. Cite all illustrations in the text and provide a brief legend, to be set in type, for each. Do not combine line
drawings and photographs in one illustration. Do not incorporate the legend in the figure itself. Use India ink and heavy white paper or blue-lined coordinate paper for line drawings and graphs. Use heavier lines for curves than you use for axes. Place labels parallel to the axes, using capital and lower-case letters; put units of measurement in parentheses after the label—for example, Length (m). Plan your figures for the smallest possible printed size consistent with clarity.

Photographs should have a glossy finish, with sharp contrast between black and white areas. Indicate magnification with a scale line on the photograph.

Tables. Type each table on a separate sheet, number it with an Arabic numeral, give it a title, and cite it in the text. Double space throughout. Give each column a heading. Indicate units of measure in parentheses in the heading for each column. Do not change the unit of measure within a column. Do not use vertical rules. Do not use horizontal rules other than those in the heading and at the bottom. A column containing data readily calculated from data given in other columns can usually be omitted; if such a column provides essential data, the columns containing the other data can usually be omitted.

Plan your table for small size. A one-column table may be up to 42 characters wide. Count characters by counting the widest entry in each table column (whether in the body or the heading) and allow three characters for spaces between table columns. A two-column table may be 90 characters wide.

Equations and formulas. Use quadruple spacing around all equations and formulas that are to be set off from the text. Most should be set off. Start them at the left margin. Use the solids for simple fractions, adding the necessary parentheses. But if braces and brackets are required, use built-up fractions. Identify handwritten symbols in the margin, and give the meaning of all symbols and variables in the text immediately after the equation.

Articles

Articles, both solicited and unsolicited, may range in length from 2000 to 5000 words (up to 20 manuscript pages). Write them clearly in reasonably non-technical language. Provide a title of one or two lines of up to 26 characters per line and a subtitle consisting of a complete sentence in two lines with a character count between 95 and 105 for the sentence (spaces between words count as one character each). Do not break words at the ends of lines. Write a brief author note, giving your position and address. Do not include acknowledgments. Place title, subtitle, and author note on page 1. Begin the text on page 2.

Insert subheads at appropriate places in the text to mark your main ideas. The set of subheads should show that your ideas are presented in a logical order. Keep subheads short—up to 35 characters and spaces.

Provide a summary at the end.

Do not submit more than one illustration (table or figure) for each four manuscript pages unless you have planned carefully for grouping. With such planning many illustrations can be accommodated in the article. Consult the editorial office for help in planning.

Reports

Short reports of new research results may vary in length from one to seven double-spaced manuscript pages of text, including the bibliography. Short papers receive preferred treatment. Limit illustrative material (both tables and figures) to two items, occupying a total area of no more than half of a published page (30 square inches). A research report should have news value for the scientific community or be of unusual interest to the specialist or of broad interest because of its interdisciplinary nature. It should contain solid research results or reliable theoretical calculations. Speculation should be limited and is permissible only when accompanied by solid work.

Title. Begin the title with an important word (preferably a noun) that identifies your subject. The title may be a conventional one (composed primarily of nouns and adjectives), a sentence (containing a verb), or a structure with a colon (Jupiter: Its Captured Satellites). Limit it to six lines of complete words of no more than 55 characters per line (spaces between words count as one character each). Do not use abbreviations. Type the title in the middle of page 1.

Abstract. Provide an abstract of 45 to 55 words on page 2. The abstract should amplify the title but should not repeat it or phrases in it. Qualifying words for terms used in the title may be used. Tell the results of the work, but not in terms such as "was found," "is described," or "is presented."

Text. Begin the text on page 3. Put the news first. Do not refer to unpublished work or discuss your plans for further work. If your paper is a short report of work covered in a longer paper to be published in a specialty journal, you may refer to this paper if it has been accepted. Name the journal. If the manuscript has not been accepted, refer to it as "in preparation." Omit references to private communications. Do not use subheads.

Signature. List the authors on the last page of the text and give a simple mailing address.

Received dates. Each report will be dated the day an acceptable version is received in the editorial office.

Letters

The Letters section provides a forum for discussion of matters of general interest to scientists. Letters are judged only on clarity of expression and interest. Keep them short and to the point; the preferred length is 250 words. The editors frequently shorten letters.

Technical Comments

Letters concerning technical papers in Science are published as Technical Comments at the end of the Reports section. They may add information or point out deficiencies. Reviews are obtained before acceptance.

Book Reviews

The selection of books to be reviewed is made by the editors with the help of advisers in the various specialties; arrangements are then made with reviewers. A sheet of instructions accompanies each book when it is sent to the reviewer.

Cover Photographs

Particularly good photographs that are suitable for use on the cover are desired.
