Cover

Photomicrograph (Nomarski interference microscope) of 18 neurosecretory cells from the pars intercerebralis of the brain of an adult cockroach (Periplaneta americana) after 3 weeks of culture in a chemically defined medium. Nerve fibers of a considerably large branch out profusely from the neurosecretory cells and make multiple interconnections (about × 640). See page 291. [K. R. Seshan and R. Levi-Montalcini, Washington University. St. Louis, Missouri]
