**COVER**

Nomarski interference-contrast micrograph of an aluminum-silicate mixture of stoichiometric mullite composition showing peritectic microstructure formed by slow cooling of a homogenized melt. Interpretation of such microstructures with the aid of diffusion couple technique results in a new SiO\textsubscript{2}-Al\textsubscript{2}O\textsubscript{3} phase diagram (about \( \times 1200 \)). See page 69. [ İlhan A. Akşay and Joseph A. Pask, Department of Materials Science and Engineering and Inorganic Materials Research Division, Lawrence Berkeley Laboratory, University of California, Berkeley]
