BROADLY TRAINED GENETICIST, Ph.D. 1965. Two years of research training; 35, Outstanding teacher, 15 years of professional experience. Specializes in most innovative undergraduate pro-

grams. 2266 Lake Circle, Jackson, Mississippi 32211. X

IMMUNOLOGIST, Ph.D., cellular and humoral de-
sires teaching/research position; tumor-fetal ant-
gens, autoimmunity, immunoreproduction. Box 153, SCIENCE. X

INFORMATION DISSEMINATION SPECIALIST, Ten years’
experience in foundation and federally funded programs to teach policy-makers and politicians with benchmark results. Prefer agricul-
ture training and research, epigenetic sciences. Will relocate. Box 62, SCIENCE. 3/29

INSTRUMENT REPAIR SPECIALIST, Chemistry degree plus
experience in repairing wide variety of chemical instruments from spectrometers to ther-

moregulators. Box 152, SCIENCE. X

INTERDISCIPLINARY BIOLOGIST, Ph.D. 1972. Desires po-

tition where students and teacher explore biology. Teaching (biology, botany, cell and plant physiol-

ogy, and bioethics) and research (plant growth) experience. Welcomes administrative responsibili-
ties. Box 153, SCIENCE. X

MICROBIOLOGIST, Biochemist, Ph.D. Eleven years of diversified industrial experience. Part of experience is in developing and building plants for R & D; production. Desires challenging position in indus-

try or government. Box 154, SCIENCE. X

NEUROBIOLOGIST, Writer, Editor, Ph.D. (theoretical biology) 1971. Interest in control of movement. Professional and popular publications. Seeks teaching position or publication-

related position, preferably in nonurban Northeast, for summer or fall 1974. Box 155, SCIENCE. X

NEUROPHYSIOLOGIST, Ph.D. 1968. Nationally and inter-

ationally recognized research accomplishments. Cycles in the brain, present work, and a teaching experience in Medical Neurophysiology. Desires research or teaching/research position. Box 156, SCIENCE. X

PH.D. with considerable research and teaching ex-

perience in Horticulture desires to relocate. Most interested in initiating new horticultural programs or revitalizing existing ones at 2- or 4-year institu-
tions. Box 157, SCIENCE. X

PH.D. Stanford 1962 (biology). Broadly experi-

enced in science and its history, seeks a position to pursue a novel approach to Human Ecology and integration of knowledge. Published adumbration. Box 158, SCIENCE. X

RADIATION BIOPHYSICIST, Ph.D. Nine years experi-

ence in nuclear medicine, radiation biology, health physics, radiation dosimetry, teaching, and govern-

mental regulatory activities. Numerous publica-
tions. Seeks challenging position with university or teaching hospital. Box 160, SCIENCE. X

PHYSIOLOGIST, Ph.D. Postdoctoral training (trans-

port). Seeking research, academic position. Back-
ground in psych, general, and experimental physi-

ology. Teaching experience. Publications. Box 159, SCIENCE. X

Virologist, Ph.D. Viral oncology, tissue culture, medical microbiology, teaching medical students, and experience in industry. Desires active academic teaching/research position at liberal arts college/teaching hospital. Box 161, SCIENCE. X

POSITIONS WANTED

1) ASSISTANT PROFESSOR OF BIOLOGY. Ph.D. in health-related area.

2) ASSISTANT PROFESSOR OF EARTH SCIENCE. Requires Ph.D. in earth sciences with some field experience. Prefer to work with child-

ren. Box 162, SCIENCE. X

3) ASSISTANT PROFESSOR OF BIOLOGICAL SCIENCES. Applicants are invited for six available faculty positions at the Assistant Professor level. Qualifica-
tions: Ph.D. in any area of active research program; competency in teaching courses at the undergraduate and graduate levels. Fields of interest include: (i) Vertebrate Zoology (Comparative Anatomy and Embryology); (ii) General Botany (Flora and Marine Biology); (iv) General and Applied Microbiology; (v) Virology; (vi) Genetics. Candidates should have evidence of experience and current interests in teaching and research. Reference letters should be addressed to the Search Committee. Submit curriculum vitae, including current addresses, within 2 weeks from date of posting. Box 163, SCIENCE. X

ASSISTANT PROFESSOR OF CLINICAL MEDICINE. Applicants are invited from physicians, M.D. with practice qualifications certifiable in District of Columbia within 1 year. Candidate must show evidence of ability in computer programming, and research or practical experience in one of the following: mathematics, engineering, or computer science. Teaching experience at pre or post M.D. level desirable. Candidates should have a background in medical genetics and a desire to teach. Candidates should apply to: Committee, Department of Clinical Medicine, George Wash-

ington University, 2320 R St., NW, Washington, D.C. 20037.

We are an equal opportunity employer.

ASSISTANT PROFESSOR OF ENTOMOLOGY AND ASSISTANT APICULTURIST. App-

licable July 1974. Ph.D. in entomology or related biological sciences. Responsibilities include teaching with honey bees, teaching in agriculture, and possibly other courses in entomology. Special preference for candidates with experience in entomology and/or a background in apiculture. Box 164, SCIENCE. X

BIOLOGICAL SCIENCE.箱

ASSISTANT PROFESSOR OF NEUROBIOLOGY. Available 1 July 1974. Ph.D. in entomology or related biological sciences. Responsibilities include teaching with honey bees, teaching in agriculture, and possibly other courses in entomology. Special preference for candidates with experience in entomology and/or a background in apiculture. Box 164, SCIENCE. X

ASSISTANT PROFESSOR OF ENTOMOLOGY. Available 1 July 1974. Ph.D. in entomology or related biological sciences. Responsibilities include teaching with honey bees, teaching in agriculture, and possibly other courses in entomology. Special preference for candidates with experience in entomology and/or a background in apiculture. Box 164, SCIENCE. X

ASSISTANT PROFESSOR OF ENDOCRINOLOGY. Available 1 July 1974. Ph.D. in endocrinology or related biological sciences. Responsibilities include teaching with honey bees, teaching in agriculture, and possibly other courses in entomology. Special preference for candidates with experience in entomology and/or a background in apiculture. Box 164, SCIENCE. X

ASSOCIATE PROFESSOR OF CLINICAL MEDICINE. Applicants are invited from physicians, M.D. with practice qualifications certifiable in District of Columbia within 1 year. Candidate must show evidence of ability in computer programming, and research or practical experience in one of the following: mathematics, engineering, or computer science. Teaching experience at pre or post M.D. level desirable. Candidates should have a background in medical genetics and a desire to teach. Candidates should apply to: Committee, Department of Clinical Medicine, George Wash-

ington University, 2320 R St., NW, Washington, D.C. 20037.

We are an equal opportunity employer.

Instructions for Contributors

The Editors of Science

Manuscripts submitted to Science for consideration for publication can be handled expeditiously if they are prepared in the form described in these instructions.

Submit an original and two duplicates of each manuscript. With the manuscript send a letter of transmittal giving (i) the name(s) of the author(s); (ii) the title of the paper and a one- or two-sentence statement of its main point; (iii) the name, address, and field of interest of four to six persons in North America but outside your institution who you think are qualified to act as referees for your paper; (iv) the names of colleagues who have reviewed your paper for you; (v) the field(s) of interest of readers who you anticipate will wish to read your paper.

Editorial Policies

All papers submitted are considered for publication. The author's membership or lack of membership in the AAAS is not a factor in selection. Papers are accepted with the understanding that they have not been published, submitted, or accepted for publication elsewhere. Authors will usually be notified of acceptance, rejection, or need for revision in 4 to 6 weeks (Reports) or 6 to 10 weeks (Articles).

Types of papers. Five types of signed papers are published: Articles, Reports, Letters, Technical Comments, and Book Reviews. Familiarize yourself with the general form of the type of paper you wish to submit by looking over a recent issue of the journal, and then follow the instructions for that type of paper.

Reviews. Almost all Articles, Reports, and Technical Comments, whether solicited or not, are sent to two or more outside referees for evaluation of their significance and soundness. Forms showing some of the criteria reviewers are expected to consider are available on request.

Editing. Papers are edited to improve the effectiveness of communication between the author and his readers. The most important goal is to eliminate ambiguities. In addition, improvement of sentence structure often permits readers to absorb salient ideas quickly. When editing is extensive, with consequent danger of altered meanings, papers are returned to the author for correction and approval before type is set. Authors are free to make additional changes at this stage.

Proofs. One set of galley proofs or an equivalent is provided for each paper. Keep alterations to a minimum, and mark them only on the galley, not on the manuscript. Extensive alterations may delay publication by 2 to 4 weeks.

Reprints. An order blank for reprints accompanies proofs.

Writing Papers

Organize your material carefully, putting the news of your finding or a statement of the problem first, supporting details and arguments second. Make sure that the significance of your work will be apparent to readers outside your field, even if you feel you are explaining too much to your colleagues. Present each step in terms of the purpose it serves in supporting your finding or solving the problem. Avoid chronological steps, for the purpose of the steps may not be clear to the reader until he finishes reading the paper.

Provide enough details of method and equipment so that another worker can repeat your work, but omit minute and comprehensive details which are generally known or which can be covered by citation of another paper. Use metric units of measure. If measurements were made in English units, give metric equivalents.

Avoid specialized laboratory jargon and abbreviations, but use technical terms as necessary, defining those likely to be known only in your field. Readers will skip a paper they do not understand. They should not be expected to consult a technical dictionary.

Choose the active voice more often than you choose the passive, for the passive voice usually requires more words and often obscures the agent of action. Use first person, not third; do not use first person plural when singular is appropriate. Use a good general style manual, not a specialty style manual. The University of Chicago style manual, the style manual of the American Institute of Physics, and the Style Manual for Biological Journals, among others, are appropriate.

Manuscripts

Prepare your manuscript in the form used by Science. Use bond paper for the first copy. Submit two duplicates. Double-space title, abstracts, text, signature, address, references (including the lines of a single reference), figure legends, and tables (including titles, columns, headings, body, and footnotes). Do not use single spacing anywhere. Put the name of the first author and the page number in the upper right-hand corner of every page.

Paging. Use a separate page for the title; number it page 1. Begin each major section—text, references and notes, and figure legends—on a new sheet. Place each table on a separate sheet. Place figure legends and tables after the references.

Title. Begin the title with a word useful in indexing and information retrieval (not "Effect" or "New").

References and Notes. Number all references to the literature, footnotes, and acknowledgments in a single sequence in the order in which they are cited in the text. Gather all acknowledgments into a single citation, and keep them short ("I thank," not "I wish to thank"). Cite all references and notes but do not cite them in titles or abstracts. Cite several under one number when feasible. Use the "Biosciences Information Service of Biological Abstracts," BIOSIS, with the few suggested revisions in International List of Periodical Title Word Abbreviations for abbreviations of journal names. If the journal is not listed there, provide the full name. Use the following forms:

Illustrations. Submit three copies of each diagram, graph, map, or photograph. Cite all illustrations in the text and provide a brief legend, to be set in type, for each. Do not combine line drawings and photographs in one illus-

29 MARCH 1974
tration. Do not incorporate the legend in the figure itself. Use India ink and heavy white paper or blue-lined coordinate paper for line drawings and graphs. Use heavier lines for curves than you use for axes. Place labels parallel to the axes, using capital and lower-case letters; put units of measure- ment in parentheses after the label— for example, Length (m). Plan your figures for the smallest possible printed size consistent with clarity.

Photographs should have a glossy finish, with sharp contrast between black and white areas. Indicate magnification with a scale line on the photograph.

Tables. Type each table on a sepa- rate sheet, number it with an Arabic numeral, give it a title, and cite it in the text. Double space throughout. Give each column a heading. Indicate units of measure in parentheses in the heading for each column. Do not change the unit of measure within a column. Do not use vertical rules. Do not use horizontal rules other than those in the heading and at the bottom. A column containing data readily calculated from data given in other col- umns can usually be omitted; if such a column provides essential data, the columns containing the other data can usually be omitted.

Plan your table for small size. A one-column table may be up to 42 characters wide. Count characters by counting the widest entry in each table column (whether in the body or the heading) and allow three characters for spaces between table columns. A two- column table may be 90 characters wide.

Equations and formulas. Use quad- ruple spacing around all equations and formulas that are to be set off from the text. Most should be set off. Start them at the left margin. Use the in- line mathematics. Partial fractions of linear equations. The factorization of polynomials is presented. The factorization of a polynomial of degree n is done by finding a factor of the form (x - a), then using polynomial long division to factor the remaining polynomial. The factorization of polynomials of degree n is done by finding a factor of the form (x - a), then using polynomial long division to factor the remaining polynomial.

Articles

Articles, both solicited and unsolic- ited, may range in length from 2000 to 5000 words (up to 20 manuscript pages). Write them clearly in reason- ably nontechnical language. Provide a title of one or two lines of up to 26 characters per line and a subtitle consist- ing of a complete sentence in two lines with a character count between 95 and 105 for the sentence (spaces between words count as one character each). Do not break words at the ends of lines. Write a brief author note, giving your position and address. Do not include acknowledgments. Place title, subtitle, and author note on page 1. Begin the text on page 2.

Insert subheads at appropriate places in the text to mark your main ideas. The set of subheads should show that your ideas are presented in a logical order. Keep subheads short—up to 35 characters and spaces.

Provide a summary at the end.

Do not submit more than one illus- tration (table or figure) for each four manuscript pages unless you have planned carefully for grouping. With such planning many illustrations can be accommodated in the article. Consult the editorial office for help in planning.

Reports

Short reports of new research res-ults may vary in length from one to seven double-spaced manuscript pages of text, including the bibliography. Short papers receive preferred treat-ment. Limit illustrative material (both tables and figures) to two items, occupying a total area of no more than half of a published page (30 square inches). A research report should have news value for the scientific community or be of unusual interest to the specialist or of broad interest because of its inter- disciplinary nature. It should contain solid research results or reliable theo- retical calculations. Speculation should be limited and is permissible only when accompanied by solid work.

Title. Begin the title with an impor- tant word (preferably a noun) that identifies your subject. The title may be a conventional one (composed pri- marily of nouns and adjectives), a sentence (containing a verb), or a structure with a colon (Jupiter: Its Captured Satellites). Limit it to two lines of complete words of no more than 55 characters per line (spaces between words count as one char-acter each). Do not use abbreviations. Type the title in the middle of page 1.

Abstract. Provide an abstract of 45 to 55 words on page 2. The abstract should amplify the title but should not repeat it or phrases in it. Quali- fying words for terms used in the title may be used. Tell the results of the work, but not in terms such as “was found,” “is described,” or “is presented.”

Text. Begin the text on page 3. Put the news first. Do not refer to un- published work or discuss your plans for further work. If your paper is a short report of work covered in a longer paper to be published in a special-ty journal, you may refer to this paper if it has been accepted. Name the journal. If the manuscript has not been accepted, refer to it as “in prepara- tion.” Omit references to private communications. Do not use subheads.

Signature. List the authors on the last page of the text and give a simple mailing address.

Received dates. Each report will be dated the day an acceptable version is received in the editorial office.

Letters

The Letters section provides a forum for discussion of matters of gen- eral interest to scientists. Letters are judged only on clarity of expression and interest. Keep them short and to the point; the preferred length is 250 words. The editors frequently shorten letters. See instructions for the prepara- tion of manuscripts.

Technical Comments

Letters concerning technical papers in Science are published as Technical Comments at the end of the Reports section. They may add information or point out deficiencies. Reviews are ob- tained before acceptance.

Book Reviews

The selection of books to be reviewed is made by the editors with the help of advisers in the various specialties; arrangements are then made with re- viewers. A sheet of instructions accom- panies each book when it is sent to the reviewer.

Cover Photographs

Particularly good photographs that are suitable for use on the cover are desired.
