Now concentrate 48 samples at once...

Brinkmann's new Sample Concentrator SC/48 accommodates up to 48 evaporation tubes in a stainless steel rack, eliminating handling of individual samples.

Concentration is by means of heat and vacuum, combined with an air current directed into each sample. A glass cover prevents fumes from escaping and permits use of nitrogen atmosphere. Solid-state circuitry, with a temperature range adjustable from 30 to 100°C. Ideal for drug screening extractions, column chromatography, liquid scintillation and many other procedures.

Brinkmann SC/48 Sample Concentrator

Radiation Chemistry of Monomers,

When degrees count—count on REVCO.

Revco performance and dependability aren't claims—they're facts. Our long list of customers served—and satisfied—bears this out. Whatever your ULTra-Low® temperature need, Revco supplies a wide range of freezers, both upright and chest, for scientific and industrial application. And with our Inventory Control System we'll adapt any unit to your individual requirements. Freezers from 1.5 to 25 cubic feet and pulldowns from -35°C. to -100°C.

Write for free fact folder.

PERSONNEL PLACEMENT

It is requested that only those employers who will not discriminate on the basis of race, religion, color, or national origin submit positions open advertising.

POSITION WANTED: 404 per word, minimum component. Broad experience cellular control mechanisms, cancer research or exercise. Publications. Research-teaching or research position. Box 313, SCIENCE.

BIOCHEMIST-BIOTECHNOLOGIST, Ph.D. 1978. Interests: Immunology, oncology, tumor biology. Experience teaching/graduate. Send resume to: Box 314, SCIENCE.

BIOENGINEER, M.D., Ph.D. Extensive experience in Community Hospitals, Control Systems, Simulation, Control Machines, Biologically Technological. Seeks change to new position. Box 107, SCIENCE.

BIOLIGIST/NUTRITIONIST, Ph.D. Two years postdoctoral teaching; B.A., mathematics, geology. Experience in writing, teaching, enzymology, nutrition. Special interest in interdisciplinary work. Box 204, SCIENCE.

BIOPHYSICAL CHEMIST, Ph.D. Experience with non-profit research and educational institution, industry, and government. Publications. Seeks academic, government, or industrial position. Box 314, SCIENCE.

CELLULAR IMMUNOLOGIST, Ph.D. 1974. Woman desires teaching position in Washington, D.C., area, Box 316, SCIENCE.

CLINICAL MICROBIOLOGIST, Board Certified. Post- doctoral experience in 300-bed hospital seeks directorship of diagnostic microbiology. Seeks academic position. Box 310, SCIENCE.

GENETICIST, woman, Ph.D., seeks position. Teaching experience in genetics, zoology, and evolution with research experience with publications. Box 311, SCIENCE.

Do you have a national and international Medical-Scientific Program that needs creative and imaginative leadership to get it going? I will be available for a new academic position. Send resume, Box 317, SCIENCE.

Molecular biologist, M.D., Ph.D., Associate Professor with tenure, 8 years teaching experience at graduate level with interest in molecular biology, including animal viruses, and research on immune response. Box 313, SCIENCE.

Molecular biologist, Ph.D., 1972. Virology, immunology, antibiotic, technical basic sciences and chemistry. Seek access to diabetes for research on immune response. Box 313, SCIENCE.

NUTRITIONIST/BIOCHEMIST, Ph.D. Human and animal research/teaching experience. Some administration. Seeks teaching/academic position. Prefer eastern States or abroad. Box 202, SCIENCE.

PH.D. 1970. Immunology, host-parasite relationship; cell biology, tumor, medicine, immunotherapy. Publications available. Available States or Canada. Box 323, SCIENCE.

Physiologist, Ph.D., with broad biological background and teaching/research/administrative experience. Publications. Available 1 September or later. Box 201, SCIENCE.

Positions OPEN

ASSISTANT PROFESSOR

Assistant Professor of Natural Resources Policy; Ph.D. in political science; demonstrated research interest in applications to natural resources. A nondiscriminatory affirmative action employer. All applications, including letter from Dean James T. McFadden, School of Natural Resources, The University of Michigan, 3515 Houghton Hall, Ann Arbor, Michigan 48104.

University of Virginia—ASSOCIATE PROFESSOR/SCHOLARSHIP IN BIOSYNTHESIS IN BIOLOGICAL SYSTEMS. Position available in January or September 1975. Candidates of outstanding promise in the field of protein biochemistry and/or immunology will be considered. Send curriculum vitae, including references and statement of research plans to Chairman, Recruiting Committee, Department of Chemistry, University of Virginia, Charlottesville, Va. 22901. The University of Virginia is an equal opportunity employer.

ASSISTANT/ASSOCIATE PROFESSOR

Assistant or Associate Professor, M.D., Cali- fornia license. Board qualified in Medicine required. Experience in general medicine, internal medicine, and/or pediatrics. Send curriculum vitae, references, and letter from recent employers. Box 324, SCIENCE.

Assistant or Associate Professor, M.D., California license. Board qualified in Medicine required. Experience in general medicine, internal medicine, and pediatrics. Send curriculum vitae, references, and letter from recent employers. Box 324, SCIENCE.

Cell biologist/Radiopharmaceutical Scientist, M.S., Pharmacy, M.D., Radiation Biology. Experience in cell kinetics, molecular biology, nuclear medicine, radioligand assay, teaching, university expansion work. Publications. Send curriculum vitae. Box 316, SCIENCE.

Clinical Microbiologist, Board Certified. Postdoctoral experience in 300-bed hospital seeks directorship of diagnostic microbiology. Seeks academic position. Box 310, SCIENCE.

BIOLIGIST/NUTRITIONIST, Ph.D. Two years postdoctoral teaching; B.A., mathematics, geology. Experience in writing, teaching, enzymology, nutrition. Special interest in interdisciplinary work. Box 324, SCIENCE.

Biophysical Chemist, Ph.D. Experience with non-profit research and educational institution, industry, and government. Publications. Seeks academic, government, or industrial position. Box 314, SCIENCE.

Cell biologist/Radiopharmaceutical Scientist, M.S., Pharmacy, M.D., Radiation Biology. Experience in cell kinetics, molecular biology, nuclear medicine, radioligand assay, teaching, university expansion work. Publications. Send curriculum vitae. Box 316, SCIENCE.

Clinical Microbiologist, Board Certified. Postdoctoral experience in 300-bed hospital seeks directorship of diagnostic microbiology. Seeks academic position. Box 310, SCIENCE.

Geneticist, woman, Ph.D., seeks position. Teaching experience in genetics, zoology, and evolution with research experience with publications. Box 311, SCIENCE.

Assistant or Associate Professor, M.D., Cali- fornia license. Board qualified in Medicine required. Experience in general medicine, internal medicine, and pediatrics. Send curriculum vitae, references, and letter from recent employers. Box 324, SCIENCE.

Assistant or Associate Professor, M.D., Cali- fornia license. Board qualified in Medicine required. Experience in general medicine, internal medicine, and pediatrics. Send curriculum vitae, references, and letter from recent employers. Box 324, SCIENCE.

Assistant or Associate Professor, M.D., Cali- fornia license. Board qualified in Medicine required. Experience in general medicine, internal medicine, and pediatrics. Send curriculum vitae, references, and letter from recent employers. Box 324, SCIENCE.

Assistant or Associate Professor, M.D., Cali- fornia license. Board qualified in Medicine required. Experience in general medicine, internal medicine, and pediatrics. Send curriculum vitae, references, and letter from recent employers. Box 324, SCIENCE.

Assistant or Associate Professor, M.D., Cali- fornia license. Board qualified in Medicine required. Experience in general medicine, internal medicine, and pediatrics. Send curriculum vitae, references, and letter from recent employers. Box 324, SCIENCE.

Assistant or Associate Professor, M.D., Cali- fornia license. Board qualified in Medicine required. Experience in general medicine, internal medicine, and pediatrics. Send curriculum vitae, references, and letter from recent employers. Box 324, SCIENCE.

Assistant or Associate Professor, M.D., Cali- fornia license. Board qualified in Medicine required. Experience in general medicine, internal medicine, and pediatrics. Send curriculum vitae, references, and letter from recent employers. Box 324, SCIENCE.

PHYSICIST

American Association of Colleges of Pharmacy. Silver Spring, Maryland, seeks an Executive Di-
rector. Position requires executive and adminis-
trative ability and an advanced degree in phar-
dacy or health related areas. Other qualified
individuals considered. Salary, range paid phar-
dacy deans. EOE.

Contact Dr. A. J. Bartlucel, Chairman, Search
Committee, College of Pharmacy and Allied Health
Professions, Grand Central and Utopia Parks,
New York 11439.

GEOPHYSICIST

The Lamont-Doherty Geological Observa-
tory of Columbia University announces
openings in the seismology group as a Research
Associate or Senior Research As-
sociate. Candidates must have a strong back-
ground in seismic in-
strumentation and data analysis
and will be expected to lead exist-
ing and initiate new programs of
research involving observations of earth
strain, tilt, and long-period
seismic waves. Qualified can-
didates are invited to submit a
résumé of their qualifications,
publications, names and addres-
ses of three references before
August 15, 1974, to Dr. Lynn R.
Sykes, Lam-
ont-Doherty Geological Observa-
tory, Palisades, New York 10964.
Columbia University is an equal
opportunity employer.

IN VITRO DIAGNOSTICS

Senior Investigator
A career opportunity is available for a Senior Investigator with a
well-established midwestern manufacturer of diagnostic products.
The individual will be responsible for organizing, directing, and
conducting research programs aimed at creating new diagnostic
reagent systems.
Experience in clinical chemistry and/or related areas required. Ph.D.
applicants preferred. Industrial exposure is desirable but not
required.
Send résumé including education, work experience, and salary
history/requirements, in confidence to: Box 330, SCIENCE.

An Equal Opportunity Employer

28 JUNE 1974
INVERTEBRATE RUTHERFORD PLASMID DNA REPLICATION PROFESSORSHIP BEGINNING FALL 1974. Will teach a basic zoology course and an invertebrate zoology course at the undergraduate level and a graduate course in invertebrate zoology. A competency in behavior of invertebrates is desired. Teaching experience is preferred; a Ph.D. required. Applications will be accepted with all credentials to: Dr. W. R. Jenkins, Chairman, Department of Biology, Livingston College, Rutgers University, New Brunswick, N.J. 08903. An equal opportunity, affirmative action employer.

JUNIOR FACULTY POSITION IN PHYSIOLOGY

Applications are invited for faculty positions at the levels of Instructor or Assistant Professor. Doctoral Degree and postdoctoral experience is necessary. Applicant must have experience in muscle physiology and/or transport processes and strong interest in teaching as well as research. Send curriculum vitae, giving research interests and references to: Dr. Oscar Hechter, Chairman, Department of Physiology, Northwestern University Medical School, McGaw Medical Center, 363 East Chicago Avenue, Chicago, Illinois 60611. An Equal Opportunity/Affirmative Action Employer.

PLASMID BIOCHEMISTRY

Immediate postdoctoral opening in area of plasmid DNA replication and maintenance. Send curriculum vitae and references to: Dr. Bruce Klene, Department of Biochemistry, University of Tennessee, Knoxville, Tennessee 37916.

POSTDOCTORAL POSITION - MEMBRANE BIOCHEMISTRY

Available 1 September 1974. Research on the role of membranes in reproduction, including isolation of membranes from sperm and studies of their biochemical properties. Send inquiries to: Dr. W. L. Zahler, Department of Agricultural Chemistry, University of Missouri-Columbia, Columbia, Missouri 65201.

POSTDOCTORAL POSITION

For biochemist to work on role of conformational changes in mechanisms of action and regulation of multifunctional enzyme complex. Experience with chemical modification of proteins and/or fluorescence or electron spin resonance needed. Available now for 2 years, $10,000 per year. Send resume to: Dr. H. Richard Levy, Department of Biology, Syracuse University, 130 College Place, Syracuse, N.Y. 13210. Syracuse University is an Equal Opportunity/Affirmative Action Employer, M/F.

POSTDOCTORAL POSITION

THE UNIVERSITY OF CALGARY

THE FACULTY OF MEDICINE

Applications and nominations are invited for the positions of Professor and Head, Division of

MORPHOLOGICAL SCIENCE

and Professor and Head, Division of

PHARMACOLOGY & THERAPEUTICS

The successful applicants will be expected to have an interest in undergraduate and graduate medical education and to be well-established and active investigators.

The positions are to be filled Sept. 1/74 or as soon as possible. Salary will be according to qualification and experience.

Nominations and/or applications will be received by Dr. L. E. McLeod, Dean, Faculty of Medicine, The University of Calgary, Calgary, Alberta, T2N 1N4, Canada, until July 1, 1974. Applications are to be accompanied by a detailed curriculum vitae.

DIVISION OF OPHTHALMOLOGY—UNIVERSITY OF CALIFORNIA, SAN DIEGO, has the following openings:

1) Assistant Professor whose qualifications include (i) substantial skill in clinical ophthalmology and patient care; (ii) skill in teaching medical students, interns, and residents; and (iii) potential for accomplishment and interest in scientific research.

2) Full-time research scientist whose qualifications include (i) a Ph.D. or M.D. degree; and (ii) previous experience and a record of scientific productivity in ophthalmologic research.

Send curriculum vitae, bibliography, and three letters of reference along with first inquiry to: Marshall J. Orloff, M.D., Chairman, Department of Surgery, University Hospital, 225 W. Dickinson Street, San Diego, California 92103. An Equal Opportunity/Affirmative Action Employer.

RESEARCH ADMINISTRATION—Children's Hospital Medical Center in Boston, affiliated with Harvard Medical School, has an important position open—Assistant Director of Research Administration. We are looking for a person with a strong fiscal/systems/science background with specific experience in grant and contract administration and a familiarity with HEW and NIH. Salary is commensurate with experience, the benefits excellent, the professional environment outstanding.

Explore this opportunity with us. Please send your résumé and salary requirements to Paul Masoner, Employment Manager, Children's Hospital Medical Center, 300 Longwood Avenue, Boston, Mass. 02115. Women and minority persons are urged to apply. We are an equal opportunity affirmative action employer.

SYDNEY-AUSTRALIA

UNIVERSITY OF NEW SOUTH WALES

PROFESSOR OF PASTORAL SCIENCES

Applications are invited for appointment to the above chair in the School of Wool and Pastoral Sciences. The present Head of School is Professor P. R. McMahon. Applicants should have experience in the scientific development and technology of the pastoral industry and its products and be capable of providing leadership in their particular fields of interest. Professional qualifications and/or research experience in areas such as animal production, range management, agricultural economics, and pastoral economy are desirable. The professor will supervise and participate in teaching and examining undergraduate and postgraduate students in the School and engage in and promote research and advanced study in the field of his chair.

Salary $Aust19,614 per annum (approx. $US29,225 at 20 May 1974). Subject to the consent of the University Council, professors may undertake a limited amount of higher consultative work. The University reserves the right to fill any chair by invitation.

For details of appointment and application form, write to APPOINTMENTS OFFICE, P.O. BOX 1, KENSINGTON, N.S.W. AUSTRALIA 2033. Applications close on 18 October 1974.

FIRST IN EXECUTIVE SEARCH FOR THE HEALTH INDUSTRIES

LABORATORY ANIMAL VETERINARIAN

THE BIOLOGY DIVISION OF THE OAK RIDGE NATIONAL LABORATORY seeks a veterinarian (D.V.M.) to assist in providing a high quality program of care for its research animals.

The initial functions of the position will be to supervise the diagnostic laboratory and to develop and maintain programs of preventive medicine. Subsequently the successful applicant will assume responsibilities in management, training, research support, and research in laboratory animal medicine.

The Biology Division is one of the world’s major biological research centers and conducts an extensive program of graduate education in biomedical sciences as well. Supporting the Division’s use of experimental animals is the Laboratory Animal Resources Section, which manages more than 100,000 square feet of modern animal facilities and with a staff of more than 75 persons, provides for the care and health of about 300,000 experimental animals.

Send résumé, academic transcripts, and salary requirements to:

Calvin E. Lamb
Personnel Div., ORNL
Union Carbide Corp., Nuclear Div.

Oak Ridge, Tennessee 37830

An Equal Opportunity Employer

Bio-Analytical Chemist

The Marshall Division of Miles Laboratories, Inc., a recognized leader in industrial enzymes and food ingredients, provides an excellent opportunity in the area of protein chemistry for a Bio-Analytical Chemist.

The successful candidate should have an M.S. degree in chemistry or biochemistry with background in protein amino acids and instrumental methods of analysis. A B.S. degree with experience in the above fields is acceptable. The position will involve development of analytical methods and support for a group doing research in proteins.

Located in Elkhart, Indiana, a community of 50,000 population, we offer excellent recreational and educational opportunities as well as convenient accessibility to the Chicago area. Excellent starting salary commensurate with experience plus a superior benefits program. Relocation expenses paid by the company. Please send complete résumé plus expected salary, in confidence to:

City State Zip MJ06
SOCIAL SCIENTIST, MANAGEMENT, STATISTICAL, COMPUTER SKILLS—Major new research involves collecting and analyzing data for an employer seeking a social scientist who has managerial, statistical, computer skills to direct computer services and carry on own research program. The institute is devoted to expanding knowledge and improving conditions in child and youth development and welfare. An interdisciplinary team, composed of sociologists, educators, anthropologists, social workers, and economists. A visiting program of distinguished scholars also is available. Positions centers also will be initiated. The Director of Manpower has been assisted in acquiring strong training in quantitative applications of the social sciences, and in computer skills. He must also have a strong background in management and administration in order to coordinate the program as well as assist other major research, academic, and service institutions. He will be charged with planning and selection of hardware and software configurations as they affect the research units. Knowledge of experimental and quasi-experimental design and the area of measurement would be useful as would analysis of variance and co-variance, multiple regression, and other multivariate statistical approaches. Good consulting skills are required. The position is designated for a Ph.D. who is selected an opportunity to design and carry out his own research as well. Salary and other benefits are negotiable.

RESEARCH ANALYST
State Uses Of Remote Sensing Data Research Analyst to initiate and maintain discussions with state agencies regarding the uses of remote sensing data. Preferred: M.A. in Sciences, Economics, Engineering, Political Science, Public Administration. Familiar with the use and application of remote sensing technology preferred. Some writing ability required. Start immediately.

RESEARCH ASSOCIATE
Immediate opening tumor immunology, west coast medical school. Experience in tumor antibodies and immunodiagnostics desired. An equal opportunity employer.

RESEARCH ASSOCIATE
Biophysical or biomedical engineer with physiology background to take charge of research program to develop laser surgical instrumentation and techniques.

SUPervisor
Infectious and immune diseases diagnostic laboratory. Requires M.S. or experience in immunology. New method development optional. Available July. Send curriculum vitae, letters to Dr. N. Sharon, Department of Pathology, Evanston Hospital, 2650 Ridge, Evanston, Ill. 60201.

FELLOWSHIP
POSTDOCTORAL FELLOWSHIP IN NEUROPHARMACOLOGY
Applicants holding the Ph.D. or M.D. degree will be considered for research fellowship in Neuropathology/Neuropharmacology. Research training will be in molecular, cellular, and neurochemical techniques, such as extracellular and intracellular recording and iontophoresis studies of central neuronal structures and receptor mechanisms in animals. Starting date open. For information write: M. Badwey, Associate Professor, Department of Biochemistry and Pharmacology, Tufts University School of Medicine, Box 153, 110 Harrison Avenue, Boston, Mass. 02111.

TRAINING SESSION
UNIVERSITY OF CHICAGO
MULTIVARIATE ANALYSIS OF QUALITATIVE DATA TRAINING SESSION
September 4-7, 1974
Study in this session will focus on three powerful computer programs for the analysis of qualitative data by log-linear models and item analysis and scale construction. The session will include lectures and computer work. Write: R. D. Bock, Department of Psychology, University of Chicago, 5835 S. Kimbark Ave., Chicago, IL 60637.

INTERNATIONAL CONGRESS
Vth International Biophysics Congress 1975
COPENHAGEN, 4th-9th August 1975
The Vth International Biophysics Congress will be held from 4th to 9th August 1975. The opening and closing plenary sessions will be concerned with:

1. Secretary epithelium and the active transport
2. Electrical and chemical excitation.
3. The scientific symposia will include symposia organized by the Union's Special and Affiliated Commissions on:
   a) Biology and physics of membranes.
   b) I onic channels, ionophores, and noise in biomembranes.
   c) The dynamics of macromolecules.
   d) Spectroscopic methods and biological structures.
   e) Cell injury and repair processes.
   f) Radioactivity and light and other types of radiation.
   g) Membranes and structure of membranes.
   h) Bioenergetics.
   i) Enzyme systems.
   j) Structural characteristics and rheology of biological membranes.

On two evenings there will be symposia in memory of Albert Abraham. Contributed communications will be presented at Poster Sessions. In connection with the Congress an exhibition of scientific instruments will be arranged. On arrival, all participants should apply to the Congress Secretariat. Those wishing to contribute papers should apply for pre-registration forms to: Vth International Biophysics Congress c/o DIS Congress Services 3. Knaurostraede 17, 5000 Aarhus K, Denmark

The date for pre-registration is 17th August 1974. Since the number of hotel rooms available in Copenhagen is limited, late applicants may have to find their own accommodation. The maximum number of participants will be limited to 2,300 active participants, 200 students and 125 spouses or family members. Priority will be given to persons who have first sent in their pre-registration forms.

Distinctively advanced optical efficiency

Research quality images in a standard priced instrument... that's what you'll get with the new Bausch & Lomb Balplan Microscope. Whether you're using it alone or consulting with another through the dual-viewing module, the new, innovative optical system will show you images true in detail, color, contrast.

We've combined lateral color correcting flint and crown glasses as well as fluorite elements in a completely new system. Multi-Film coatings minimize flare. Flat fields sharp to the edge, plus extra wide field coverage (up to 17% more area) make viewing and photography richly rewarding.

Color coded, ball detent positioned achromatic, flat field objectives start with a new 2.5X and feature the spring loaded 40X and 100X oil. All are parfocal, par-centered and interchangeable. Of course, the system is infinity corrected. There is also a selection of apochromats.

A complete line of condensers plus a full choice of integral illuminators fulfill every requirement of the system.

Put it all together and you'll agree that Balplan is different—truly one-of-a-kind.

LOOK INTO BALPLAN. No other microscope system offers so much for so little... a premium quality, research type microscope at up to half the price of another brand of comparable quality. See for yourself in a live demonstration in your lab with your own specimens. Send for new 24-page full color catalog 31-2411 and our free demonstration offer.
The AO® FluoreStar V20 is about the most compact microscope package you can use for fluorescence techniques. A mercury-vapor arc lamp is enclosed in the base with easy-to-reach light centration controls at front and side. All exciter, neutral density and barrier filters are contained in rotatable turrets for easy dial-in filter change convenience. And there’s room for additional filters to suit your personal preference.

Two condensers, allowing quick interchange from darkfield to conventional brightfield, assure multiple technique capability.

How about that?

A fluorescence microscope in this little space.

All this, plus the AO infinity-corrected optical system for outstanding contrast, resolution and color correction, gives you a lot of microscope in this little space.

For more information, see your AO representative or write for detailed literature.

Instructions for Contributors

The Editors of Science

Manuscripts submitted to Science for consideration for publication can be handled expeditiously if they are prepared in the form described in these instructions.

Submit an original and two duplicates of each manuscript. With the manuscript send a letter of transmittal giving (i) the name(s) of the author(s); (ii) the title of the paper and a one- or two-sentence statement of its main point; (iii) the name, address, and field of interest of four to six persons in North America but outside your institution who you think are qualified to act as referees for your paper; (iv) the names of colleagues who have reviewed your paper for you; (v) the field(s) of interest of readers who you anticipate will wish to read your paper.

Editorial Policies

All papers submitted are considered for publication. The author's membership or lack of membership in the AAAS is not a factor in selection. Papers are accepted with the understanding that they have not been published, submitted, or accepted for publication elsewhere. Authors will usually be notified of acceptance, rejection, or need for revision in 4 to 6 weeks (Reports) or 6 to 10 weeks (Articles).

Types of papers. Five types of signed papers are published: Articles, Reports, Letters, Technical Comments, and Book Reviews. Familiarize yourself with the general form of the type of paper you wish to submit by looking over a recent issue of the journal, and then follow the instructions for that type of paper.

Reviews. Almost all Articles, Reports, and Technical Comments, whether solicited or not, are sent to two or more outside referees for evaluation of their significance and soundness. Forms showing some of the criteria reviewers are expected to consider are available on request.

Editing. Papers are edited to improve the effectiveness of communication between the author and his readers. The most important goal is to eliminate ambiguities. In addition, improvement of sentence structure often permits readers to absorb salient ideas quickly. When editing is extensive, with consequent danger of altered meanings, papers are returned to the author for correction and approval before type is set. Authors are free to make additional changes at this stage.

Proofs. One set of galley proofs or an equivalent is provided for each paper. Keep alterations to a minimum, and mark them only on the galley, not on the manuscript. Extensive alterations may delay publication by 2 to 4 weeks.

Reprints. An order blank for reprints accompanies proofs.

Writing Papers

Organize your material carefully, putting the news of your finding or a statement of the problem first, supporting details and arguments second. Make sure that the significance of your work will be apparent to readers outside your field, even if you feel you are explaining too much to your colleagues. Present each step in terms of the purpose it serves in supporting your finding or solving the problem. Avoid chronological steps, for the purpose of the steps may not be clear to the reader until he finishes reading the paper.

Provide enough details of method and equipment so that another worker can repeat your work, but omit minute and comprehensive details which are generally known or which can be covered by citation of another paper. Use metric units of measure. If measurements were made in English units, give metric equivalents.

Avoid specialized laboratory jargon and abbreviations, but use technical terms as necessary, defining those likely to be known only in your field. Readers will skip a paper they do not understand. They should not be expected to consult a technical dictionary.

Choose the active voice more often than you choose the passive, for the passive voice usually requires more words and often obscures the agent of action. Use first person, not third; do not use first person plural when singular is appropriate. Use a good general style manual, not a specialty style manual. The University of Chicago style manual, the style manual of the American Institute of Physics, and the Style Manual for Biological Journals, among others, are appropriate.

Manuscripts

Prepare your manuscript in the form used by Science. Use bond paper for the first copy. Submit two duplicates. Double-space title, abstracts, text, signature, address, references (including the lines of a single reference), figure legends, and tables (including titles, columns, headings, body, and footnotes). Do not use single spacing anywhere. Put the name of the first author and the page number in the upper right-hand corner of every page.

Paging. Use a separate page for the title; number it page 1. Begin each major section—text, references and notes, and figure legends—on a new sheet. Put each table on a separate sheet. Place figure legends and tables after the references.

Title. Begin the title with a word useful in indexing and information retrieval (not "Effect" or "New").

References and Notes. Number all references to the literature, footnotes, and acknowledgments in a single sequence in the order in which they are cited in the text. Gather all acknowledgments into a single citation, and keep them short ("I thank," not "I wish to thank"). Cite all references and notes but do not cite them in titles or abstracts. Cite several under one number when feasible. Use the "BioSciences Information Service of Biological Abstracts," BIOSIS, with the few suggested revisions in International List of Periodical Title Word Abbreviations for abbreviations of journal names. If the journal is not listed there, provide the full name. Use the following forms:

Illustrations. Submit three copies of each diagram, graph, map, or photograph. Cite all illustrations in the text and provide a brief legend, to be set in type, for each. Do not combine line drawings and photographs in one illus.
tion. Do not incorporate the legend in the figure itself. Use India ink and heavy white paper or blue-lined coordinate paper for line drawings and graphs. Use heavier lines for curves than you use for axes. Place labels parallel to the axes, using capital and lower-case letters; put units of measurement in parentheses after the label—for example, Length (m). Plan your figures for the smallest possible printed size consistent with clarity.

Photographs should have a glossy finish, with sharp contrast between black and white areas. Indicate magnification with a scale line on the photograph.

Tables. Type each table on a separate sheet, number it with an Arabic numeral, give it a title, and cite it in the text. Double space throughout. Give each column a heading. Indicate units of measure in parentheses in the heading for each column. Do not change the unit of measure within a column. Do not use vertical rules. Do not use horizontal rules other than those in the heading and at the bottom. A column containing data readily calculated from data given in other columns can usually be omitted; if such a column provides essential data, the columns containing the other data can usually be omitted.

Plan your table for small size. A one-column table may be up to 42 characters wide. Count characters by counting the widest entry in each table column (whether in the body or the heading) and allow three characters for spaces between table columns. A two-column table may be 90 characters wide.

Equations and formulas. Use quadruple spacing around all equations and formulas that are to be set off from the text. Most should be set off. Start them at the left margin. Use the solidus for simple fractions, adding the necessary parentheses. But if braces and brackets are required, use built-up fractions. Identify handwritten symbols in the margin, and give the meaning of all symbols and variables in the text immediately after the equation.

Articles

Articles, both solicited and unsolicited, may range in length from 2000 to 5000 words (up to 20 manuscript pages). Write them clearly in reasonably nontechnical language. Provide a title of one or two lines of up to 26 characters per line and a subtitle consisting of a complete sentence in two lines with a character count between 95 and 105 for the sentence (spaces between words count as one character each). Do not break words at the ends of lines. Write a brief author note, giving your position and address. Do not include acknowledgments. Place title, subtitle, and author note on page 1. Begin the text on page 2.

Insert subheads at appropriate places in the text to mark your main ideas. The set of subheads should show that your ideas are presented in a logical order. Keep subheads short—up to 35 characters and spaces.

Provide a summary at the end.

Do not submit more than one illustration (table or figure) for each four manuscript pages unless you have planned carefully for grouping. With such planning many illustrations can be accommodated in the article. Consult the editorial office for help in planning.

Reports

Short reports of new research results may vary in length from one to seven double-spaced manuscript pages of text, including the bibliography. Short papers receive preferred treatment. Limit illustrative material (both tables and figures) to two items, occupying a total area of no more than half of a published page (30 square inches). A research report should have news value for the scientific community or be of unusual interest to the specialist or of broad interest because of its interdisciplinary nature. It should contain solid research results or reliable theoretical calculations. Speculation should be limited and is permissible only when accompanied by solid work.

Title. Begin the title with an important word (preferably a noun) that identifies your subject. The title may be a conventional one (composed primarily of nouns and adjectives), a sentence (containing a verb), or a structure with a colon (Jupiter: Its Captured Satellites). Limit it to two lines of complete words of no more than 55 characters per line (spaces between words count as one character each). Do not use abbreviations. Type the title in the middle of page 1.

Abstract. Provide an abstract of 45 to 55 words on page 2. The abstract should amplify the title but should not repeat it or phrases in it. Qualifying words for terms used in the title may be used. Tell the results of the work, but not in terms such as “—— was found,” “is described,” or “is presented.”

Text. Begin the text on page 3. Put the news first. Do not refer to unpublished work or discuss your plans for further work. If your paper is a short report of work covered in a longer paper to be published in a specialty journal, you may refer to this paper if it has been accepted. Name the journal. If the manuscript has not been accepted, refer to it as “in preparation.” Omit references to private communications. Do not use subheads.

Signature. List the authors on the last page of the text and give a simple mailing address.

Received dates. Each report will be dated the day an acceptable version is received in the editorial office.

Letters

The Letters section provides a forum for discussion of matters of general interest to scientists. Letters are judged only on clarity of expression and interest. Keep them short and to the point; the preferred length is 250 words. The editors frequently shorten letters. See instructions for the preparation of manuscripts.

Technical Comments

Letters concerning technical papers in Science are published as Technical Comments at the end of the Reports section. They may add information or point out deficiencies. Reviews are obtained before acceptance.

Book Reviews

The selection of books to be reviewed is made by the editors with the help of advisers in the various specialties; arrangements are then made with reviewers. A sheet of instructions accompanies each book when it is sent to the reviewer.

Cover Photographs

Particularly good photographs that are suitable for use on the cover are desired.
