Electron-Optical Observations on the α-Transformation in Troilite: A. Putnis

The Temperature Gradient in the Solar Nebula: J. S. Lewis

Fetal Brain Growth: Selective Action by Growth Hormone: V. R. Sara et al.

Geniculate Neural Plasticity in Kittens after Exposure to Periodic Gratings: L. Maffei and A. Fiorentini

Cyclic Guanosine Monophosphate: Elevation in Degenerating Photoreceptor Cells of the C3H Mouse Retina: D. B. Farber and R. N. Lolley

Presynaptic Inhibition: Primary Afferent Depolarization in Crayfish Neurons: D. Kennedy, R. L. Calabrese, J. J. Wine

Interspecies Conversion of Clostridium botulinum Type C to Clostridium novyi Type A by Bacteriophage: M. W. Eklund et al.

Aversive Situational Effects on Alpha Feedback Training: M. T. Orne and D. A. Paskewitz

Cover

Bubble formation and growth in ordinary gelatin is used as a model for decompression sickness (the bends). Results suggest methods for improving the safety and efficiency of diving. (Actual size of bubbles is about 0.8 millimeter in diameter.) Within the bubbles (right) can be seen images of adjacent bubbles. See page 443. [Theodore L. Bell and Richard H. Strauss, University of Hawaii School of Medicine]
