Mortenson; Chemical and Biochemical Applications of Lasers, S. R. Leone; Organophosphorus Pesticides, W. C. Dauterman; The Chemistry of Organolithium Compounds, D. Seyferth; Nuclear Magnetic Resonance Spectroscopy of Nuclei Other Than Protons, O. A. Gansow; Superfluid Hydrodynamics, P. H. Roberts; Books Received

Board of Directors

Roger Revelle, Retiring President, Chairman
Margaret Mead, President
William D. McElroy, President-Elect
Richard H. Bolt, Kenneth S. Clark, Emilio Q. Baddaro, Edward E. David, Jr.

Chairmen and Secretaries of AAAS Sections

Mathematics (A) Victor L. Klee
Truman A. Botts

Physics (B) Victor F. Weisskopf
Rolf M. Sinclair

Social and Economic Sciences (K) Seymour M. Lipset
Daniel Rich

Dentistry (R) Clifton O. Dammett
Sholom Pearlman

Pharmaceutical Sciences (S) Roger C. Back
George Bassila

History and Philosophy of Science (L) Kenneth S. Clark
James R. Mervis

Information, Computing, and Communication (F) Robert M. Solow
Jordan E. Katz

Education (C) F. James Rutherford
Philip R. Ferro

Astronomy (D) Carl Sagan
Arlo U. Landolt

Engineering (E) Edward Weik, Jr.
Paul H. Robbins

Chemistry (Q) William E. Hanford
Leo Schubert

Mathematical Biosciences (G) Martin Greenberg

Science is published weekly, except the last week in December, with an extra issue on the fourth Tuesday in October, by the American Association for the Advancement of Science, 1515 Massachusetts Ave., NW, Washington, D.C. 20005. Copyright © 1975 by the American Association for the Advancement of Science. Member rates on request. Annual subscription $40; foreign postage: Americas $6, overseas $8; air to Europe $25. Single copies $1 (back issues $2) except Guide to Scientific Instruments which is $4. School year subscription: 9 months $30; 10 months $33.50. Prices for subscriptions received after 1 May 1975 will be $50; foreign postage: Americas $7, overseas $9, air to Europe $30. Please pay in advance.

Subscription change of address: Please allow 6 to 8 weeks for change of address, giving new and old address and zip code. Send a recent address label. A change of address must be accompanied by an old mailing label. Visit the Science website at http://www.sciencemag.org.
The Logical Electron Microscope.

Introducing the expanded 3.5Å Zeiss EM-10 system.

We call it the Logical Electron Microscope because it was designed with the researcher and his needs in mind. Forty years of electron microscope experience went into its planning. The result is an instrument that, in the 3.5Å, 500,000X range, is the easiest-to-operate, most versatile electron microscope ever made.

The only truly automatic camera system.

You can select any one of three cameras (3½" x 4", 70mm rollfilm, and 35mm) instantaneously. Pushing just one button
1. switches off the white panel light,
2. raises the fluorescent screen,
3. imprints the negative with a 5-digit consecutive number, the magnification, the accelerating voltage, the year, and an operator key letter,
4. sets the automatic exposure according to selected-area electron-density measurement in screen center,
5. takes a perfectly exposed electron micrograph, and
6. advances the negative.

You can take pictures all day, every day with unequalled efficiency. The large built-in dessicator holds 500 pre-loaded cassettes, so you always have an ample supply at hand. And since all information you need is recorded automatically on the negative, you don't even have to pause for record-keeping.

Designed for flexibility.

The most valuable accessories, such as the uniquely easy-to-use High Resolution Goniometer and any X-Ray analyzer of your choice, can be added without exchanging specimen stages or lenses. Without re-alignment. Without restricting the microscope in any way for other uses.

The High-Resolution Goniometer, for example, can be permanently attached to the column for convenient motorized sample manipulation without affecting the focal length, magnification, or resolution. It takes just a few seconds to change from the Goniometer specimen holder to any other, standard or special. You can see why it's the Logical Electron Microscope. The logical thing for you to do now is to get complete details.

Nationwide Service.

Synapse between two glomus cells of the rat carotid body at various angles of tilt. Without tilt the pre- and postsynaptic membranes are indistinct, because the plane of the section is tangential to the plane of the synapse. At −40°, the synapse appears as if cut in cross-section. At +40° a view of the synapse is obtained nearly orthogonal to that of −40° tilt. Taken with the EM-10 by Dr. Donald McDonald, Cardiovascular Research Institute, University of California, San Francisco.

(Since publication printing cannot show the incredible detail, send for full size glossies.)
