Cover
Multicellular complex of unicellular ciliate Blepharisma intermedium. Cells of doublet, a morphological mutant, unite side by side forming a chain if treated by the gamone of the other mating type. The chain may close, producing a flower-like formation. Such complexes are used to investigate the meiosis-initiating factor (about X 389). See page 53.

AMERICA, INC. 11 July 1975 Volume 189, No. 4197

SCIENCE is published weekly, except the last week in December, by the American Association for the Advancement of Science, 1515 Massachusetts Ave., NW, Washington, D.C. 20005. Now combined with The Scientific Monthly. Second-class postage paid at Washington, D.C. and additional entry. Copyright 1975 by the American Association for the Advancement of Science. Member rates on request. Annual subscription $50; foreign postage: Americas $7; overseas $8; air lift to Europe $30. Single copies $2 (back issues $3) except Food Issue (5 May 1975) is $3 and Guide to Scientific Instruments is $6. School year subscription: 9 months $37.50: 10 months $41.75. Provide 6 weeks notice for change of address, giving new and old address and zip codes. Send a recent address label. Science is indexed in the Reader's Guide to Periodical Literature.
