American Association for the Advancement of Science was founded in and incorporated in 1874. Its objects are to foster the work of scientists, to facilitate cooperation among them, to improve the effectiveness of science in the promotion of human welfare, and to increase public understanding and appreciation of the importance and promise of the fruits of science in human progress. COVER

Erythrocyte membranes attached to polylysine-coated polycrylamide beads (2000 : 1). The positively charged beads facilitate isolation of cell membranes whose protoplasmic surfaces are fully accessible to further probing. See page 302. [B. S. Jacobson and D. Branton, Harvard University, Cambridge, Massachusetts]
