Geomagnetic Disturbance and the Orientation of Nocturnally Migrating Birds: F. R. Moore ............................................. 682

COVER

When feeding upon Cecropia (background), an early successional tree of neotropical forests, keel-billed Toucans (Ramphastos sulphuratus) manipulate the fruiting spikes by tossing them. Birds disperse a wide variety of seed plants but may provide special ecological and evolutionary opportunities for the animal-pollinated species. See page 622. [Drawing by Dana Gardner]
