PRODUCTS AND MATERIALS  Oscilloscope Recording System; Rodent Skinner Box; Sample Processor for Tissue Culturing; Automatic Particle Counting; Automated Electrophoresis and Sedimentation Separations; High-Speed Motion Picture Camera; Reversed-Phase Thin-Layer Chromatography; Digital Compass; Literature  798

COVER  An example of "growth under difficulties," from a communication by Charles Darwin published in the Gardener's Chronicle, 29 December 1877. Darwin wrote, "The enclosed branch of Cotyledon (Echeveria stolonifera) was cut from a plant growing in my greenhouse, and was suspended on August 10 in my study. . . . It has sent out two fine flowering stems which . . . have bent upwards . . . . They have now (December 6) begun to flower. . . . [T]he specimen weighed on September 1 45.46 grammes, on December 6 36.94 grammes, so that its growth has continued in spite of a considerable loss of water." [From The Collected Papers of Charles Darwin, reviewed on page 784]
