The American Association for the Advancement of Science was founded in 1848 and incorporated in 1874. Its objects are to further the work of scientists, to facilitate cooperation among them, to improve the effectiveness of science in the promotion of human welfare, and to increase public understanding and appreciation of the importance and promise of methods of science in human progress.

Reconstruction of the fossil reptile, Petrolacosaurus. Accidental deaths in or near a river resulted in rafting of numerous carcases of reptiles to a quiet marine embayment. Thus, the brackish water Rock Lake deposits near Garnett, Kansas, supply a unique picture to an important chapter in the history of reptiles. See page 1091. [Drawn by Mrs. G. Anderson]
