Physiological Evidence for Habenula as Major Link Between Forebrain and Midbrain Raphe: R. Y. Wang and G. K. Aghajanian

Circadian Rhythm of Synaptic Excitability in Rat and Monkey Central Nervous System: C. A. Barnes et al.

Cover

Sonic booms from supersonic transports such as the Concorde may be used to probe the upper atmosphere. Acoustic signals of relatively high amplitude and low frequency, generated by the sonic booms, are reflected from both the stratosphere and the thermosphere and can be used to determine temperature and wind conditions at the reflection levels. See page 47. [British Aircraft Corp./Aerospatiale France]
