**SCIENCE**

A WEEKLY JOURNAL DEVOTED TO THE ADVANCEMENT OF SCIENCE, PUBLISHING THE OFFICIAL NOTICES AND PROCEEDINGS OF THE AMERICAN ASSOCIATION FOR THE ADVANCEMENT OF SCIENCE.

FRIDAY, NOVEMBER 18, 1904.

**CONTENTS:**

The Sphere of Bacteriology: Professor Edwin Oakes Jordan ............... 657

Evolution of Weevil-resistance in Cotton: O. F. Cook ......................... 666

Scientific Books:—

Scientific Journals and Articles ..................................... 672

Societies and Academies:—

Discussion and Correspondence:—

Special Articles:—
An Overlooked Form of Stereoscope: Professor Joseph Jastrow. The Nature of the Action of Drugs on the Heart: Dr. A. J. Carlson .................. 683

Quotations:—
The College Year .................. 689

Botanical Notes:—
Botany as a Factor in Education: The Birches; Forestry Notes: Professor C. E. Bessey ................. 689

Industrial Education in Germany ................................ 691

The Johnston Scholarships of the Johns Hopkins University .................. 692

The New York Historical Society .................................. 692

American Association for the Advancement of Science, Section C: Professor Charles Lathrop Parsons ............... 693

Trimmed Copies of Science .................. 693

Scientific Notes and News .................. 693

University and Educational News .................. 695

MSS. intended for publication and books, etc., intended for review should be sent to the Editor of SCIENCE, Garrison-on-Hudson, N. Y.

**THE SPHERE OF BACTERIOLOGY.**

It is possibly a contemporary delusion that we are living in a period of unexamined mental activity. The life of the intrepid modern scholar affords opportunity for self-deception. If one becomes a member of a sufficient number of learned and quasi-learned societies, and attends committee meetings for an adequate variety of purposes, the impression of profitable intellectual endeavor may be prematurely acquired. There is much, however, to account for the prevailing sensation of breathless advance. The physiological and psychological accompaniments of a breakneck pace are not altogether lacking in the modern world, and there are bacteriologists in particular who will lend a credent ear to affirmations of the rapidity of scientific progress. However this may be, few can question that the development of the science of bacteriology has been marked by an unusual tempo. To those who have followed this development closely, discovery has trod upon the heels of discovery in bewildering succession. The scant thirty
