Magnetospheric Effects of Power Line Radiation: C. G. Park and R. A. Helliwell

Pollination by Lemurs and Marsupials: An Archaic Coevolutionary System: R. W. Sussman and P. H. Raven

Science and Technology: The Road Ahead: F. Press

Addiction to Technology Is One Cause of Navy’s Shipbuilding Crisis

Round Another Helix in the Legislative Helter-Skelter

Science in Europe/Professors’ Pay Strike May Lead to Free Degrees

Briefing: Antinuclear Protests Are Busting Out All Over; Science at State—Back to Square One; French Science Policy—An Old School Tie

Computer Films: Adding an Extra Dimension to Research

Energy: Elements of a Latin American Strategy

Hydrogen Cyanide Production During Reduction of Nitric Oxide over Platinum Catalysts: Transient Effects: R. J. H. Voorhoeve et al. .................................................. 761
Carbon: A New View of Its High-Temperature Behavior: A. G. Whittaker .................................................. 763
A New High-Pressure Form of Sulfur Derived from the Decomposition of S4N4: G. C. Vezzoli and J. Abel .......................................................... 765
Namoratunga: The First Archeoastronomical Evidence in Sub-Saharan Africa: B. M. Lynch and L. H. Robbins .................................................. 766
Photoinduced Nucleation of Water Vapor: F. C. Wen, T. McLaughlin, J. L. Katz .......................... 769
The Oldest Bryozoans: New Evidence from the Early Ordovician: J. D. McLeod .................................................. 771
Collagenase Immunolocalization in Cultures of Rheumatoid Synovial Cells: D. E. Woolley et al. .......................................................... 773
Different Actions of Anticonvulsant and Anesthetic Barbiturates Revealed by Use of Cultured Mammalian Neurons: R. L. MacDonald and J. L. Barker .................................................. 775
Cortical Neurons Sensitive to Combinations of Information-Bearing Elements of Biosonar Signals in the Mustache Bat: N. Suga, W. E. O’Neill, T. Manabe .................................................. 778
Intracellular Translocation of Iodine-125-Labeled Insulin: Direct Demonstration in Isolated Hepatocytes: P. Gorden et al. .................................................. 782
‘Another Flame Retardant, Tris-(1,3-Dichloro-2-Propyl)-Phosphate, and Its Expected Metabolites Are Mutagens: M. D. Gold, A. Blum, B. N. Ames .................................................. 785
Spine Stems on Tectal Interneurons in Jewel Fish Are Shaped by Social Stimulation: R. G. Coss and A. Globus .................................................. 787
Regeneration of Symmetrical Hindlimbs in Larval Salamanders: D. L. Stocum .................................................. 790
Cholecystokinin Inhibits Tail Pinch–Induced Eating in Rats: C. B. Nemerooff et al. .................................................. 793
A Neural Map of Auditory Space in the Owl: E. I. Knudsen and M. Konishi .................................................. 795
Intracellular Calcium: Its Movement During Pentylentetrazole-Induced Bursting Activity: E. Sugaya and M. Onozuka .................................................. 797
Dyskinesias Evoked in Monkeys by Weekly Administration of Haloperidol: B. Weiss and S. Santelli .................................................. 799

Suspended Solids Analyzers; Kjeldahl Nitrogen Analyzer; Scanning Electron Microscope; X-ray Spectrometer; Instrument Alarm-Monitor; Liquid Fraction Collector; Computerized Axial Tomograph; Literature .................................................. 804

American Association for the Advancement of Science was founded in 1848 and incorporated in 1874. Its objects are further the work of scientists, to facilitate cooperation among them, to foster scientific freedom and responsibility, to improve the effectiveness of science in the promotion of human welfare, and to increase public understanding and appreciation of the importance and promise of the methods of science in human progress.

Spined pyriform interneurons found in the optic tecta of African jewel fish (Hemichromis bimaculatus). The left interneuron came from a community-reared fish and has more spines, as well as spines with shorter stems on the lower dendrites, than those on the right interneuron from an isolation-reared fish. See page 787. [Golgi illustration (× 630) by Richard R. Coss, University of California at Davis]
