We appeal to your exceptional needs.

Kodak offers you hundreds of choices in films, plates, and papers for scientific applications.

Kodak meets most scientific photorecording needs with an extensive line of commercial photographic products, many of which are designed for special applications.

These sensitized products have proven their value as problem-solving tools in astrophotography, electron microscopy, emission spectrography, holography, photomicrography, and other investigative techniques.

The wide range of sensitometric and physical properties of our standard films, plates, and papers makes them useful for the vast majority of photorecording applications. Nevertheless, a need occasionally arises that cannot be met by a Kodak sensitized product regularly stocked by your dealer. But a catalog-listed, factory-stocked item might fill your need quite nicely.

Whatever your photographic requirements, your dealer in Kodak photographic products will help you select the material suited to your particular requirements—and place your order also. You can help by telling your dealer about your requirements, such as:

- Speed
- Resolution
- Granularity
- Contrast
- Illuminant
- Spectral response
- Format
- Quantity

By their uncommon nature, some specialized products require different handling from regular products, may cost a little more, and take longer to deliver. But they're worth it. A few can be supplied in small quantities, but manufacturing considerations may impose a minimum order.

For successful photographic results, ask your dealer to help you choose the Kodak film, plate, or paper suited to your special need. Remember, consider on-the-shelf products first and factory-stocked items second; and if other alternatives need to be explored, your dealer can call upon a Kodak representative to assist in product selection.

A transmission electron micrograph of a section of the renal cortex of a rat (magnification 16,000 x). Exposed in the microscope on Kodak Electron Image Film 4463—one of a number of Kodak products designed for specialized applications.

From the pages of SCIENCE comes a series of compendia designed to cover the principal issues that face science and society—now and for tomorrow. Each book presents the reader with an in-depth review of a given issue through authoritative articles written by the leading experts in the field. These compendia can serve not only as valuable reference sources for scientists and researchers, but also as supplementary reading material in courses devoted to these issues that concern all of us.

ENERGY
USE, CONSERVATION, AND SUPPLY

VOLUME II

Coming this summer—an all-new Energy Compendium volume will be published by AAAS. Energy-II contains a complete new set of articles dealing with energy conservation and public policy; our remaining supply of fossil fuels and the transition to fission, fusion, and solar energy, with an extensive analysis of the domestic and international perspective on present energy-use patterns.

*Retail price:
$14.00 (casebound)
$6.00 (paperbound)

Special Combination Price for both Energy Vol. I & Vol. II
*Retail Price:
$22.00 (casebound)
$8.00 (paperbound)

VOLUME I

Published in 1974, Energy-I gives the reader a historical and general overview of our energy problem and examines ways to conserve energy and use it more efficiently, not only in industry but on an individual level. The book examines the problems we face in the energy requirements for food production and reviews known energy sources in relation to current and future energy needs.

*Retail price:
$10.00 (casebound)
$3.50 (paperbound)

Additional titles in the AAAS Science Compendia Series are

ELECTRONICS: The Continuing Revolution
MATERIALS: Renewable and Nonrenewable Resources

POPULATION: Dynamics, Ethics, and Policy
FOOD: Politics, Economics, Nutrition, and Research

*Retail price for any of the above four titles:
$12.00 each, casebound
$4.50 each, paperbound

To order individual copies of the AAAS Science Compendia Series please send your name, address and list of book titles (indicating casebound or paperbound) to AAAS, Dept. S-1, 1515 Massachusetts Ave., NW, Washington, D.C. 20005. Remittance must accompany all orders under $10.00. Please allow 6-8 weeks for delivery.

*AAAS Members may deduct 10% of retail price of each book.
Whether you need
Mid-IR,
GC-IR,
LC-IR,
Near-IR or
Far-IR measurement capabilities
NICOLET COVERS THE FT-IR SPECTRUM FROM 10 cm⁻¹ to 20,000 cm⁻¹.

SENSITIVITY — Variable mirror scan rates from 0.05 cm/sec to 4 cm/sec optimize the system for highest signal-to-noise ratio (sensitivity) in a given measurement time.

RESOLUTION — Routinely achieves 0.06 cm⁻¹ resolution.

SUBTRACTION — Spectral stripping (subtraction) is easily used to extract solvent or aqueous background features from spectra. In many cases this allows the sample to be measured “in situ” without chemical extraction.

PREPROGRAMMED EXPERIMENTS — A macro-programming capability allows the user to easily design complicated experiments which are then implemented by pushing one button. This automates the experiment from sample insertion to automatic results plotting.

USING THE NICOLET 7199 FT-IR AS AN “INTELLIGENT DETECTOR”

The Advantages of the Nicolet CHEMIGRAM™

■ Spectrometer and data system from one manufacturer.

For more details refer to Coffey, P., Mattson, D. & Wright, J., “A Programmable GC/FT-IR System.” American Laboratory, May 1978 (in publication).

(Nicolet also offers field-proven, FT-IR data systems with complete software packages to upgrade existing spectrometers.)

For more details on the world’s finest FT-IR system please phone or write Nicolet.
