Enkephalin-Like Material Elevated in Ventricular Cerebrospinal Fluid of Pain Patients After Analgetic Focal Stimulation: H. Akil et al.
Central Nervous System Dysfunction Due to Lead Exposure: J. A. Valciukas et al.

COVER
Spinal cord cells grown in dissociated cell culture. The yellow fluorescence throughout the central nerve cell represents endogenous neuronal reactivity to antiserum against enkephalin antibody. The intimate apposition of the “opiate peptide” containing neuronal processes and nonreactive cells suggests the possibility of peptide-mediated communication. See page 467. [Joseph Neale et al., Georgetown University, Washington, D.C.]
